Environ, Geog & Geol Sciences (EGGS)

Academic Level (Course Level)
Undergraduate

Course Description
Studies the composition and structure of the Earth and the internal and external processes that shape the surface of our planet. The laboratory introduces fundamental geological techniques including rock and mineral identification and classification, map interpretation, and qualitative and quantitative analysis. The course meets for three hours of lecture and two hours of laboratory per week. Field trips may be required.

EGGS125 - Geology of Gemstones

General

Course Long Title
Geology of Gemstones

Course Subject Code
EGGS

Course Number
125

Department
Environ, Geog & Geol Sciences (EGGS)

Academic Level (Course Level)
Undergraduate

Course Description
Introduces the composition, origin, occurrence, properties, and identification of gemstones. The course illustrates how internal Earth processes produce various minerals commonly used as gemstones and how surficial Earth processes act to release and concentrate gemstones into economically viable deposits. Students will learn the geologic setting of gemstones, common principles of mineralogy, crystallography, and gemology. Course topics will emphasize the rarity of gemstone deposits as it applies to geologic conditions necessary for their formation.

EGGS130 - Historical Geology

General

Course Long Title
Historical Geology

Course Subject Code
EGGS

Course Number
130

Department
Environ, Geog & Geol Sciences (EGGS)

Academic Level (Course Level)
Undergraduate

Course Description
Examines the evolution of Earth and life as interpreted from rock and fossil evidence; particular emphasis is placed on the geologic history of North America. The laboratory provides an interpretation of Earth's history through the identification of rock and fossil material and the interpretation of geologic maps. Field trips may be required.

Instructional Method / Attendance Policy

EGGS135 - Geology of National Parks

General

Course Long Title
Geology of National Parks

Course Subject Code
EGGS

Course Number
135

Department
Environ, Geog & Geol Sciences (EGGS)

Academic Level (Course Level)
Undergraduate

Course Description
Introduces geologic concepts using examples from our national parks and monuments. The course illustrates how Earth's internal processes are responsible for earthquakes, volcanoes, and the formation of mountain ranges; and how the action of wind, water, and ice at Earth's surface results in erosion and exposure of older rocks. Students will learn how geology observed in national parks relates to the theory of plate tectonics – a framework that has revolutionized thinking in the geosciences.

General

Course Long Title
Sustainability Science

Course Subject Code
EGGS

Course Number
140

Department
Environ, Geog & Geol Sciences (EGGS)

Academic Level (Course Level)
Undergraduate

Course Description
Investigates the interconnectedness of global trends in population growth, natural resources, energy, water resources, biodiversity, agriculture, land use and urbanization, human health, food security, inequality in economic development, and global environmental threats in the context of climate change. The strategies and decision-making skills to formulate pathways for economic growth that is socially inclusive and environmentally sustainable at the global scale will be discussed.

EGGS150 - Quantitative Methods in the Earth Sciences

General

Course Long Title
Quantitative Methods in the Earth Sciences

Course Subject Code
EGGS

Course Number
150

Department
Environ, Geog & Geol Sciences (EGGS)

Academic Level (Course Level)
Undergraduate

Course Description
Introduces and applies the quantitative methods commonly used in the Geosciences. Students will learn how to measure or estimate the physical properties of the materials that make up the Earth, the forces that operate on the Earth, and the age of the Earth. Emphasis will be placed on activities that demonstrate these methods and exposure to real problems solved by Geoscientists.

EGGS200 - Geography of US and Canada

General

Course Long Title
Geography of US and Canada

Course Subject Code
EGGS

Course Number
200

Department
Environ, Geog & Geol Sciences (EGGS)

Academic Level (Course Level)
Undergraduate

Course Description
Surveys regions of the US and Canada and implements spatial analyses through the study of diversity in culture, economy, and physical landscapes at the continental scale. Students will apply geographic concepts to critically address similarities and differences across regions, and examine the interrelationships between people and the environment.

Grade Modes

General

Course Long Title
Outdoor Pursuits

Course Subject Code
EGGS

Course Number
202

Department
Environ, Geog & Geol Sciences (EGGS)

Academic Level (Course Level)
Undergraduate

Course Description
Focuses on the skills and principles of outdoor pursuits. Students build competencies in multiple outdoor pursuits, which may include, but are not limited to, backpacking, map reading and orienteering, snow sports, canoeing, kayaking, fishing, challenge course activities, mountain biking, and rock climbing. Emphasis is placed on learning skills and techniques for safe participation in backcountry environments, proper use of equipment, and causing minimal impacts by practicing Leave-No-Trace principles.

General

Course Long Title
Special Topics in Regional Geography

Course Subject Code
EGGS

Course Number
205

Department
Environ, Geog & Geol Sciences (EGGS)

Academic Level (Course Level)
Undergraduate

Course Description
Surveys the physical and human geography of a specific area of the world. Focuses on a regional analysis of the area within a physical, cultural, economic, and environmental context. This course may be offered as study abroad. During the study abroad offering, students will collect, analyze, and present information related to the study region before and during the field trip. Presentations will be both written and oral. Students will incur costs for up to three weeks of transportation, room, and board as well as venue entrance fees. The course may involve camping and strenuous hiking.

General

Course Long Title
Geography of the Developing World

Course Subject Code
EGGS

Course Number
212

Department
Environ, Geog & Geol Sciences (EGGS)

Academic Level (Course Level)
Undergraduate

Course Description
Examines the nature, characteristics, challenges, and possibilities associated with development in economically peripheral regions of the world. Spatial aspects of uneven development, globalization, and interaction between developed and developing regions of the world will be addressed through analyzing environmental settings, historical circumstances, institutions, and cultural forces associated with underdevelopment and poverty.

General

Course Long Title
Introduction to Soil Science

Course Subject Code
EGGS

Course Number
213

Department
Environ, Geog & Geol Sciences (EGGS)

Academic Level (Course Level)
Undergraduate

Course Description
Provides a thorough background to the geo-environmental aspects of soil such as its physical and chemical properties, factors of soil formation, classification, and geographical distribution. Examines the interpretation of soil surveys and their role in land-use planning, natural resource management, and environmental quality. One semester field trip is required.

General

Course Long Title
Global Water Issues

Course Subject Code
EGGS

Course Number
218

Department
Environ, Geog & Geol Sciences (EGGS)

Academic Level (Course Level)
Undergraduate

Course Description
Introduces students to fundamentals of water issues around the world, and how they affect the development, design, evolution and sustainability of societies and economic viability. Includes discussion of case studies where conflicts over water allocations, drought limitations, water quality problems and catastrophic floods are damaging societies and international relations. Students will be exposed to and discuss current and developing methods for reducing such problems in support of more sustainable societies.

General

Course Long Title
Introduction to Surveying

Course Subject Code
EGGS

Course Number
275

Department
Environ, Geog & Geol Sciences (EGGS)

Academic Level (Course Level)
Undergraduate

Course Description
Equips non-engineering majors (e.g., geologists, geographers, field biologists, and archaeologists) with basic surveying skills including measurement of distances, horizontal angles, and vertical angles. Although not an engineering class, basic geometry skills will be required. Students will spend at least one third of class time collecting raw field data, drawing plans and sections, and learning how to input basic XY data into a geographic information system.

Grade Modes

EGGS280 - Oil and Gas Geology

General

Course Long Title
Oil and Gas Geology

Course Subject Code
EGGS

Course Number
280

Department
Environ, Geog & Geol Sciences (EGGS)

Academic Level (Course Level)
Undergraduate

Course Description
Introduces 1) the geologic conditions required for petroleum formation and trapping; 2) how petroleum is located and wells are drilled to produce it; 3) the role that geologists have in petroleum exploration and production; 4) the environmental impacts of producing and burning these fuels; and 5) the exploration and production of natural gas specifically from the Marcellus Shale.

EGGS301 - Water Resources Management

General

Course Long Title
Water Resources Management

Course Subject Code
EGGS

Course Number
301

Department
Environ, Geog & Geol Sciences (EGGS)

Academic Level (Course Level)
Undergraduate

Course Description
Examines contemporary water resource issues related to environmental planning and management. Field trips may be required.

General

Course Long Title
Soil Morphology Practicum

Course Subject Code
EGGS

Course Number
313

Department
Environ, Geog & Geol Sciences (EGGS)

Academic Level (Course Level)
Undergraduate

Course Description
Provides hands-on experience with identifying, evaluating, classifying, and describing soil profiles, with emphasis on developing skills necessary to be successful in soil judging competitions. Students will identify diagnostic features and horizons, interpret soil profiles and landscape characteristics, and evaluate soil properties and suitability for different land uses. A one-week mid-semester field trip is required.

General

Course Long Title
Political Geography

Course Subject Code
EGGS

Course Number
314

Department
Environ, Geog & Geol Sciences (EGGS)

Academic Level (Course Level)
Undergraduate

Course Description
Analyzes current world and national problems within the framework of systematic political geography. Attention will be focused on world trouble spots, elections, boundary friction, resource allocation, population pressure, and ethnic nationalism from a geographical standpoint.

General

Course Long Title
Interpreting Cultural and Natural Resources

Course Subject Code
EGGS

Course Number
316

Department
Environ, Geog & Geol Sciences (EGGS)

Academic Level (Course Level)
Undergraduate

Course Description
Surveys the philosophies, guiding principles and professional practices of cultural and natural resource interpretation. The primary focus is on the design and delivery of interpretive experiences, programs, and materials that inspire a deep connection to history and nature. Using a variety of interpretive techniques, students learn how to translate the complexities of the natural world to diverse populations in a variety of settings and formats.

General

Course Long Title
Remote Sensing of the Earth

Course Subject Code
EGGS

Course Number
320

Department
Environ, Geog & Geol Sciences (EGGS)

Academic Level (Course Level)
Undergraduate

Course Description
Introduces the principles and practices of remote sensing technology involving air- or spacecraft-borne electromagnetic radiation sensors; how data are collected, downloaded, manipulated and analyzed in a computer environment for a variety of scientific and landscape analyses. Provides practical experience using remotely sensed data in GIS using computer-based activities.

EGGS325 - UAV Applications

General

Course Long Title
UAV Applications

Course Subject Code
EGGS

Course Number
325

Department
Environ, Geog & Geol Sciences (EGGS)

Academic Level (Course Level)
Undergraduate

Course Description
Introduces unmanned aerial systems (UAS) and their applications within the fields of environmental, geographical and geological sciences. Course topics include operations with fixed-wing and rotor-based unmanned aerial vehicles (UAVs), hardware/software command and control systems, geographic information system (GIS) analysis, the basics of flight, regulations, and safety. Students will gain hands-on experience in design and execution of UAV operations to acquire and process aerial imagery and video.

General

Course Long Title
Principles of Emergency Management

Course Subject Code
EGGS

Course Number
335

Department
Environ, Geog & Geol Sciences (EGGS)

Academic Level (Course Level)
Undergraduate

Course Description
Explores the historical development of emergency management and important contemporary policies guiding emergency management practice at the local, national, and international levels. The four phases of emergency management (preparedness, response, recovery, and mitigation) and the key roles of individuals, agencies, and organizations involved in emergency management are examined. A field trip may be required.

General

Course Long Title
Geostatistics

Course Subject Code
EGGS

Course Number
342

Department
Environ, Geog & Geol Sciences (EGGS)

Academic Level (Course Level)
Undergraduate

Course Description
Examines the development of the basic principles of geostatistics and its practical applications in the geosciences. Students will inventory, quantify, and simulate spatial and temporal patterns for multi-disciplinary analysis, and develop an understanding of the geostatistical toolsets available for descriptive and inferential analysis of geoscience phenomena. Course utilizes ArcGIS and various software to visualize and explore these spatial data.

General

Course Long Title
Outdoor Recreation Resource Management

Course Subject Code
EGGS

Course Number
385

Department
Environ, Geog & Geol Sciences (EGGS)

Academic Level (Course Level)
Undergraduate

Course Description
Provides an advanced examination of outdoor recreation management resources, principles, and practices, with an emphasis on individual and group behavior. Topics include outdoor recreation planning, visitor management, carrying capacity and normative research, site design and management, recreation ecology (impacts on the natural environment), depreciative behavior, recreational conflict, and cognitive and behavioral coping in natural resource settings.

General

Course Long Title
U.S. Federal Lands: Geography, Politics, Management

Course Subject Code
EGGS

Course Number
386

Department
Environ, Geog & Geol Sciences (EGGS)

Academic Level (Course Level)
Undergraduate

Course Description
Examines the origins of the major U.S. federal land management agencies, the distribution of their landholdings, and their jurisdictions and management mandates. Case studies focus on contemporary timber, range, wildlife, fisheries, biodiversity conservation, and recreation management controversies. Field trips may be required.

EGGS410 - Advanced Environmental Applications of GIS

General

Course Long Title
Advanced Environmental Applications of GIS

Course Subject Code
EGGS

Course Number
410

Department
Environ, Geog & Geol Sciences (EGGS)

Academic Level (Course Level)
Undergraduate

Course Description
Advances GIS skills by focusing on the use of raster and vector geospatial data to address issues in the natural sciences. Students research, obtain, assess, and manipulate at minimum: atmospheric, topographic, hydrologic, biogeographic, land cover and soils data. Students apply learning to a personalized project requiring a literature review, 2 or 3D analysis, and the production of maps that address environmental issues. Project subdisciplines can include biogeography, ethnobiology, atmosphere, geology, ecology, and natural resource management.

General

Course Long Title
Watershed Restoration

Course Subject Code
EGGS

Course Number
420

Department
Environ, Geog & Geol Sciences (EGGS)

Academic Level (Course Level)
Undergraduate

Course Description
Focuses on the science of enhancing a watersheds natural ability to recover from human-induced disturbances. Discusses restoration strategies that integrate hydrology, geomorphology, and ecology to improve water quality and watershed function and are used to mitigate environmental degradation of watersheds and water supplies. An advanced course that covers what Watershed Restoration is, how it is accomplished, and who carries it out. Students complete hands-on fieldwork and address current watershed problems at local field sites

General

Course Long Title
Environmental Permitting

Course Subject Code
EGGS

Course Number
421

Department
Environ, Geog & Geol Sciences (EGGS)

Academic Level (Course Level)
Undergraduate

Course Description
Introduces General Permits, NPDES permits, Erosion and Sedimentation plans, and water obstruction and encroachment permits (section 401 and 404 permits). Students will complete appropriate permitting forms and supporting materials in the context of an environmental professional who works for a consulting company or a government agency. Students will write letters to clients, collect and interpret data, write field reports for agency files, make presentations to peers, complete permit applications, and review the work of others.

Type
Prerequisite

A minimum grade of 'D-' in Course EGGS265

Earn a minimum grade (UG) of D- in the following:

- EGGS265 - Geomorphology

Additional Comments:

EGGS471 - Applied Surface Hydrology

General

Course Long Title
Applied Surface Hydrology

Course Subject Code
EGGS

Course Number
471

Department
Environ, Geog & Geol Sciences (EGGS)

Academic Level (Course Level)
Undergraduate

Course Description
Applies knowledge of water movement upon and within the earth and mathematical principles to solve practical problems in water resources. Emphasis is placed on surface hydrology. Several field trips may be required.

Grade Modes
Credit/No Credit, Academic Forgivness, Pass/Fail, Standard Letter

Prerequisite

A minimum grade of 'D-' in Course EGGS271

Earn a minimum grade (UG) of D- in the following:

- EGGS271 - Fundamentals of Hydrology

Additional Comments:

EGGS480 - Geophysical Methods

General

Course Long Title
Geophysical Methods

Course Subject Code
EGGS

Course Number
480

Department
Environ, Geog & Geol Sciences (EGGS)

Academic Level (Course Level)
Undergraduate

Course Description
Examines the theory and application of geophysical methods for exploring the Earth's subsurface environment. Emphasis is placed on those tools used by agencies or companies involved in resource and environmental assessment. Field trips are required.

Grade Modes
Credit/No Credit, Academic Forgivness, Pass/Fail, Standard Letter

EGGS505 - Introduction to GIS for Environmental Applications

General

Course Long Title
Introduction to GIS for Environmental Applications

Course Subject Code
EGGS

Course Number
505

Department
Environ, Geog & Geol Sciences (EGGS)

Academic Level (Course Level)
Graduate

Course Description
Introduces geographic information science (GIS) and remote sensing to graduate students interested in environmental research. Students explore geographic thought, coordinate systems, mapping, data models and structures, software, environmental data sources and capture, and issues related to data quality. Students apply learning to a personalized project requiring a literature review, two- or three-dimensional analysis, and map production. Project subdisciplines can include biogeography, water and climate issues, environmental biology, conservation, ecology, ethnobiology, or natural resource management.

Grade Modes
Credit/No Credit, Academic Forgivness, Pass/Fail, Standard Letter

EGGS510 - Advanced Environmental Applications of GIS

General

Course Long Title
Advanced Environmental Applications of GIS

Course Subject Code
EGGS

Course Number
510

Department
Environ, Geog & Geol Sciences (EGGS)

Academic Level (Course Level)
Graduate

Course Description
Advances GIS skills by focusing on the use of raster and vector geospatial data to address issues in the natural sciences. Students research, obtain, assess, and manipulate at minimum: atmospheric, topographic, hydrologic, biogeographic, land cover and soils data. Students apply learning to a personalized project requiring a literature review, 2 or 3D analysis, and the production of maps that address environmental issues. Project subdisciplines can include biogeography, ethnobiology, atmosphere, geology, ecology, and natural resource management.

ELEM120 - Introduction to Education

General

Course Long Title
Introduction to Education

Course Subject Code
ELEM

Course Number
120

Department
Early Childhood Education

Academic Level (Course Level)
Undergraduate

Course Description
The purpose of this course is to facilitate a successful transition to the Early Childhood and Elementary Education Department at Bloomsburg University. Students will complete 40 hours of field experience and learn about the other requirements for admission to the department. The INTASC standards, Bloom's taxonomy, and conceptual framework will also be addressed.

General

Course Long Title
Fine Arts and Play in ECE Classrooms

Course Subject Code
ELEM

Course Number
532

Department
ELED

Academic Level (Course Level)
Graduate

Course Description
Familiarize graduate students with current theories and pedagogical approaches for nurturing and promoting creative expression in young children. Students will examine the relationship between play, the arts, and learning. The visual and performing arts such as drawing, music, dance/movement, and drama in the early childhood setting are emphasized. The role of the educator in planning a creative learning environment that supports a developmentally appropriate and inclusive play and arts-based curriculum will be emphasized. This course may be offered online or in the traditional class setting.

ENGL320 - Global Literature and Culture: Topics

General

Course Long Title
Global Literature and Culture: Topics

Course Subject Code
ENGL

Course Number
320

Department
English

Academic Level (Course Level)
Undergraduate

Course Description
Focuses on global anglophone literature, or literature originally written in English outside the UK and US. Examines how interactions between colonial, economic, historical, and political factors influence the global spread of anglophone literature and culture. Introduces students to data sets and qualitative sources to enhance understanding and research. Course texts invite students to explore diverse perspectives and interrelationships, especially differences in class, race, gender, and sexuality.

ENGL420 - Studies in Genre: Topics

General

Course Long Title
Studies in Genre: Topics

Course Subject Code
ENGL

Course Number
420

Department
English

Academic Level (Course Level)
Undergraduate

Course Description
Examines representative works from a particular genre, with special emphasis on their aesthetic features as well as the larger cultural and social forces that find their way, directly or indirectly, into each work. The course may focus on Modern Drama, Modern Novel, Comedy of Manners, Gothic Novel, Renaissance Drama, Romance, Memoir and Autobiography, among others. Emphasis will be on critical reading methods, engagement with secondary criticism, enhancement of critical thinking, and developing writing skills.

Instructional Method / Attendance Policy
Face to Face, Multi-Modal, Online 100%

ENGL470 - Young Adult Literature

General

Course Long Title
Young Adult Literature

Course Subject Code
ENGL

Course Number
470

Department
English

Academic Level (Course Level)
Undergraduate

Course Description
Investigates the teaching of Young Adult (YA) literature, based on a broad definition of literacy consistent with national standards in English/Language Arts. Addresses modes, audiences, and genres, proposing criteria that can be used for choosing texts for the secondary English Language Arts classroom. Provides theoretical justification for YA literature, as well as pedagogical strategies.

ENGL491 - Senior Seminar: Track XXX

General

Course Long Title
Senior Seminar: Track XXX

Course Subject Code
ENGL

Course Number
491

Department
English

Academic Level (Course Level)
Undergraduate

Course Description
Fosters the completion of an extended creative, scholarly, or professional project related to students' program track and serves as the capstone course experience. Students create, workshop, and revise a substantive project which is suitable to showcase their skills for job/graduate school interviewing. Attention is also given to practical preparation for graduate school or a job market that values students' particular skills as writers.

ENGL493 - Independent Study

General

Course Long Title
Independent Study

Course Subject Code
ENGL

Course Number
493

Department
English

Academic Level (Course Level)
Undergraduate

Course Description
Provides an opportunity for an English major to pursue a course of reading and inquiry into some specific topic in literature, literacy studies, writing studies, or rhetoric that differs in subject matter, depth, or emphasis from our regular course offerings. The English Department faculty member conducting the independent study will be responsible for creating a syllabus, designing assessment, and grading. Credit varies according to topic as determined by instructor.

ENGT101 - Introduction to Engineering Technology

General

Course Long Title
Introduction to Engineering Technology

Course Subject Code
ENGT

Course Number
101

Department
Biochem/Chem/Engineer/Physics [BiCEP]

Academic Level (Course Level)
Undergraduate

Course Description
Provides an overview of designing experiments to look at how electronics play a role in the natural world. Topics include various engineering disciplines, product development process, communication skills, engineering problem solving, electric circuit fundamentals, analog and digital signals, microcontroller programming and interfacing, and opportunities and challenges of an engineering technology career.

General

Course Long Title
Circuit Analysis

Course Subject Code
ENGT

Course Number
141

Department
Biochem/Chem/Engineer/Physics [BiCEP]

Academic Level (Course Level)
Undergraduate

Course Description
Presents an analysis of electric circuits including computer simulation and hands-on laboratory experience using modern electronic equipment. Basic and advanced analysis techniques for dc and ac circuits containing resistors, inductors, and capacitors are emphasized. Main topics include network theorems, R-L and R-C transients, R-L-C resonance, phasors, ac power, power factor, and three-phase power.

General

Course Long Title
Senior Design Project

Course Subject Code
ENGT

Course Number
491

Department
Biochem/Chem/Engineer/Physics [BiCEP]

Academic Level (Course Level)
Undergraduate

Course Description
Provides an opportunity for student teams to design, build, test, and document their project-based work. Project definition, specification development, project management, design and implementation, and economic feasibility are discussed. Ethical issues related to the discipline, written and oral communication skills, and functionality as a member of an engineering design team are emphasized.

ENTC381 - ENGR APPL IN IND 1

General

Course Subject Code
ENTC

Course Number
381

Department
Biochem/Chem/Engineer/Physics [BiCEP]

Academic Level (Course Level)
Undergraduate

Course Description
Presents case studies of engineering problems and their solutions in various industrial settings. The role of organizational structure and project management in engineering design and manufacturing is discussed. This is the first of a two-part engineering applications in industry sequence. Three hours of lecture per week. Prerequisite: ENGTECH.380.

ESL3313 - ESL Composition II

General

Course Long Title
ESL Composition II

Course Subject Code
ESL

Course Number
3313

Department
English

Academic Level (Course Level)
Undergraduate

Course Description
Composition for advanced level non-native speakers of English. Includes intensive reading of texts from across the curriculum and analytical and critical thinking and writing, with emphasis on the particular needs of ESL students. Assignments develop analytical and critical thinking. Must be passed with a minimum grade of "C-" before graduation. Meets ENG 3313 requirement. Students may not apply both ENG 3313 & ESL 3313 towards graduation requirements.

EXER161 - Introduction to Health and Exercise Science

General

Course Long Title
Introduction to Health and Exercise Science

Course Subject Code
EXER

Course Number
161

Department
Health and Exercise Science

Academic Level (Course Level)
Undergraduate

Course Description
Provides a basic overview of the disciplines, careers, and professional duties within the various fields of health and exercise science. This course also introduces students to the variety of scientific, popularized, and professional information available to health and exercise Science professionals and the public. Students will be required to find, analyze, and use information from a variety of sources to investigate areas of interest within the fields of health and exercise science.

EXER171 - Introduction to Medical Imaging

General

Course Long Title
Introduction to Medical Imaging

Course Subject Code
EXER

Course Number
171

Department
Health and Exercise Science

Academic Level (Course Level)
Undergraduate

Course Description
Introduces students to the medical imaging profession and includes historical development, specialties within the field, organizational structure of hospital department, licensure and certification, and opportunities for professional growth. The profession is examined to assist the student in making a commitment to pursue this field. This course provides the basic knowledge of advanced imaging technologies and modalities such as Radiography (X-ray), Computed Tomography (CT), Ultrasound (US), Magnetic Resonance Imaging (MRI), and Positron Emission Tomography (PET).

EXER172 - Patient Care and Management

General

Course Long Title
Patient Care and Management

Course Subject Code
EXER

Course Number
172

Department
Health and Exercise Science

Academic Level (Course Level)
Undergraduate

Course Description
Addresses the basic concepts of routine and emergency patient care and underscores the physical and emotional needs of the patient and family. This course focuses on evidence-based management and education of patients undergoing diagnostic or therapeutic medical imaging procedures. The ethical and moral implications associated with delivery of care, along with how human diversity in healthcare impacts the treatment of patients will be discussed. Infection control procedures utilizing standard precautions will also be briefly covered.

EXER250 - Lifeguarding

General

Course Long Title
Lifeguarding

Course Subject Code
EXER

Course Number
250

Department
Health and Exercise Science

Academic Level (Course Level)
Undergraduate

Course Description
Provides an opportunity to attain an American Red Cross Lifeguarding Certificate. Effective surveillance, shallow and deep water saves, breathing and cardiac emergencies, CPR/AED, first aid, and caring for head, neck and spinal injuries are taught as part of this course. Students in this course must be proficient at swimming. Students interested in lifeguarding certification must pass the standard American Red Cross swimming tests conducted in the first week of class.

General

Course Long Title
Care and Prevention of Athletic Injuries

Course Subject Code
EXER

Course Number
282

Department
Health and Exercise Science

Academic Level (Course Level)
Undergraduate

Course Description
Exposes students to prevention techniques related to injuries and illness sustained during participation in physical activity. Students will develop skills necessary to interpret risk factors associated with participation as well as prevention and recognition of such conditions. Appropriate medical response and treatment options will be discussed.

General

Course Long Title
Psychology of Sport and Exercise

Course Subject Code
EXER

Course Number
306

Department
Health and Exercise Science

Academic Level (Course Level)
Undergraduate

Course Description
Familiarizes the student with psychological components of human performance related to sport and exercise. Focuses on sport participation and includes psychological assessment, intervention techniques, and a brief introduction to the predominant research methods used in sport psychology. Course has particular value to coaches, teachers, psychologists, exercise specialists, and other sport-affiliated professions.

EXER351 - Biomechanics

General

Course Subject Code
EXER

Course Number
351

Department
Health and Exercise Science

Academic Level (Course Level)
Undergraduate

Course Description
Provides students with a fundamental understanding of human anatomy and how the laws of physics affect body tissue and motion. Emphasis is placed on kinematic and kinetic analysis of common movements in physical activity and exercise. Students will learn to identify and describe various phases of motion and explain the mechanical significance of each in producing desired outcomes. Laboratory sessions are integrated into meeting times throughout the semester.

EXER360 - Sport Nutrition

General

Course Long Title
Sport Nutrition

Course Subject Code
EXER

Course Number
360

Department
Health and Exercise Science

Academic Level (Course Level)
Undergraduate

Course Description
Provides students with the knowledge to address the role of nutrition in response to acute and chronic exercise. Learning topics will include nutrition for fitness and sport; human energy metabolism during acute exercise and exercise training; vitamin and mineral balance and exercise; and fluid and electrolyte balance during exercise.

EXER378 - Exercise Physiology

General

Course Subject Code
EXER

Course Number
378

Department
Health and Exercise Science

Academic Level (Course Level)
Undergraduate

Course Description
Explores the function of the human body under the stress of acute and chronic physical activity. Laboratory exercises will be used to aid in student comprehension. Concepts relating to energy metabolism, neuromuscular, circulatory, and cardiorespiratory physiology are addressed in both lecture and laboratory experiences which include theoretical and practical applications to exercise. This course is intended to develop a student's understanding of how exercise impacts a number of body systems.

General

Course Long Title
Exercise and Aging

Course Subject Code
EXER

Course Number
397

Department
Health and Exercise Science

Academic Level (Course Level)
Undergraduate

Course Description
Provides a theoretical and practical basis for exercise as a modifier of age-related physiological and psychological changes. This course will prepare students to assess the physical function of older adults and design an exercise program to prevent and care for physical limitations associated with aging. In addition, common age-related medical conditions and their interventions will be reviewed.

EXER411 - ECG, Exercise Testing, and Cardiac Rehabilitation

General

Course Long Title
ECG, Exercise Testing, and Cardiac Rehabilitation

Course Subject Code
EXER

Course Number
411

Department
Health and Exercise Science

Academic Level (Course Level)
Graduate, Undergraduate

Course Description
Examines basic electrocardiogram (ECG) theory, interpretation, and the incorporation of exercise testing. In addition, this course analyzes general principles and procedures of cardiac and primary prevention programs. The organization and administration of specific program design, along with counseling and behavioral strategies will also be discussed.

Department
Health and Exercise Science

Academic Level (Course Level)
Undergraduate

Course Description
Emphasizes the fundamental principles of exercise testing and prescription with a focus on the health-related components of fitness. Students use these principles to develop appropriate exercise prescriptions for healthy and selected clinical populations. Laboratory experiences are built into the lecture component and provide students with the opportunity to engage in lab-based exercise testing. This course will include development of technical and personal skills related to functional fitness assessments, exercise prescription, exercise leadership, and program management.

EXER500 - Research Methods

General

Course Long Title
Research Methods

Course Subject Code
EXER

Course Number
500

Department
Health and Exercise Science

Academic Level (Course Level)
Graduate

Course Description
Provides an overview of relevant research methodologies and designs. Prepares graduate students to read, comprehend, and critique research; retrieve scholarly articles; and develop research-related skills for further graduate education and professional work. Students will learn how to design, conduct, and report research, and will present a proposal for a research project.?Development of research skills will be the primary focus, with emphasis placed upon planning research, utilizing research methods, and interpreting results.

General

Course Long Title
Applied Biomechanics

Course Subject Code
EXER

Course Number
551

Department
Health and Exercise Science

Academic Level (Course Level)
Graduate

Course Description
Examines the application of human movement with application of mechanical laws and principles as it relates to kinematics, kinetics, motion analysis, structural biomechanics, and properties of human tissues, with examples drawn from sport, exercise, and rehabilitation. This class is designed to provide students with a mix of theoretical concepts and applied problem-solving in various biomechanical applications in human movement with emphasis on practical applications (e.g., human performance, causes / prevention of injury etc.).

EXER590 - Thesis

General

Course Long Title
Thesis

Course Subject Code
EXER

Course Number
590

Department
Health and Exercise Science

Academic Level (Course Level)
Graduate

Course Description
Guides the student through research and independent preparation of a formal thesis in partial fulfillment of the requirements for the Thesis Option within the Master of Science degree in Applied Exercise Physiology. May be enrolled in successive semesters for a varying amount of credit, but no more than 9 credit hours may be applied toward satisfying the requirements for the Master of Science degree (Thesis Option) in Applied Exercise Physiology.

Grade Modes
Credit/No Credit, Dissertation/Thesis/Research, Academic Forgivness, Pass/Fail, Standard Letter

EXER593 - Independent Study

General

Course Long Title
Independent Study

Course Subject Code
EXER

Course Number
593

Department
Health and Exercise Science

Academic Level (Course Level)
Graduate

Course Description
Provides the opportunity for Applied Exercise Physiology students to apply scientific methods and learn the techniques of scientific research, data collection, and analysis by engaging in an individualized, graduate-level program of research under the supervision of a faculty member. The research will culminate in a scholarly report written by the student, and the results will be presented at a scientific meeting, University research day event, or other appropriate venue

EXER598 - Practicum in Applied Exercise Physiology

General

Course Long Title
Practicum in Applied Exercise Physiology

Course Subject Code
EXER

Course Number
598

Department
Health and Exercise Science

Academic Level (Course Level)
Graduate

Course Description
Provides the student with a practical on-site work experience in which technical/clinical skills and abilities are applied. The site is selected by the student with the approval of the academic advisor. The experience is designed to be a culminating experience of graduate course work and facilitates the transition from the role of student to employee.

EXS114 - Team Sports

General

Course Long Title
Team Sports

Course Subject Code
EXS

Course Number
114

Department
Health and Exercise Science

Academic Level (Course Level)
Undergraduate

Course Description
Provides activity and instruction in the development of individual offensive and defensive fundamentals and their incorporation into a team concept. Students are required to participate in various team sports to facilitate the development of healthy behaviors over their lifetimes. This course earns two GEPs toward Goal 9 Healthy Living in general education.

Grade Modes

EXS261 - First Aid and Safety

General

Course Long Title
First Aid and Safety

Course Subject Code
EXS

Course Number
261

Department
Health and Exercise Science

Academic Level (Course Level)
Undergraduate

Course Description
Provides an opportunity to attain American Red Cross Cardiopulmonary Resuscitation (CPR), Automated External Defibrillation (AED), and First Aid certification for the adult, child, and infant. Students must be able to pass both the written and practical skills tests to be eligible for certification. This course includes both care for, and prevention of, a variety of emergency situations including, but not limited to, cardiac emergencies, breathing emergencies, sudden illness, environmental emergencies, soft tissue injuries, and injuries to muscles, bones, and joints. These topics are covered in relation to adults, children, and infants, and issues pertaining to other special populations of interest such as diabetics, pregnant women, people with disabilities, and those with language barriers are also covered. This course earns two GEPs toward Goal 10 Citizenship in general education.

EXS270 - Exercise & You

General

Course Long Title
Exercise & You

Course Subject Code
EXS

Course Number
270

Department
Health and Exercise Science

Academic Level (Course Level)
Undergraduate

Course Description
Studies and measures the health-related components of physical fitness including cardiorespiratory endurance, muscular strength, muscular endurance, flexibility, and body composition and how they relate to making lifelong, healthy decisions. Anatomical structures, physiological functions, nutrition, and stress reduction are addressed through programmed exercise and practical applications. Use of emergent technology will be used to track monitor, and assess physical fitness. This course earns two GEPs toward Goal 9 Healthy Living and one GEP towards Goal 2 Information Literacy, in general education.

General

Course Long Title
Yoga - Concepts and Practice

Course Subject Code
EXS

Course Number
278

Department
Health and Exercise Science

Academic Level (Course Level)
Undergraduate

Course Description
Provides an opportunity for developing a clear understanding of the holistic approach to health and wellness through the medium of Yoga. Introduces the conceptual basis, principles, scientific aspects, practice and nomenclature based on the Yogasutras of Patanjali. Involves the systematic practice and refinement of physical postures, relaxation, and breathing techniques. This course earns two GEPs toward Goal 9 Healthy Living in general education.

General

Course Long Title
Tests and Assessments in Exercise Science

Course Subject Code
EXS

Course Number
295

Department
Health and Exercise Science

Academic Level (Course Level)
Undergraduate

Course Description
Provides an integrated examination of the theory and methodology of health- and performance-related physical fitness testing. Allows for practical experience in the selection, administration, and interpretation of physical fitness testing and assessment data for health adults with varying fitness levels. Laboratory sessions are integrated into the meeting times throughout the semester.

EXS378 - Exercise Physiology I

General

Course Long Title
Exercise Physiology I

Course Subject Code
EXS

Course Number
378

Department
Health and Exercise Science

Academic Level (Course Level)
Undergraduate

Course Description
Explores the function of how the body responds to the stress of acute and chronic physical activity and exercise. Concepts relating to energy metabolism, neuromuscular, circulatory and cardiorespiratory physiology are addressed in both lecture and laboratory experiences which include theoretical and practical applications to exercise. This course is intended to develop a student's understanding of how exercise impacts a number of bodily systems. Three hours of lecture per week and two hours of lab every other week.

FIN402 - Retirement Planning

General

Course Subject Code
FIN

Course Number
402

Department
Economics and Finance

Academic Level (Course Level)
Undergraduate

Course Description
Focuses on the importance of retirement planning, an evaluation of the clients needs, an understanding of Social Security and Medicare and qualified and non-qualified retirement plans. Among other things, it investigates the use of employer-sponsored retirement plans and alternative investments in retirement planning, related taxation and legal implication to achieve client goals, and reviews many important financial planning techniques used to help clients build a financially secure retirement.

FREN102 - Elementary French II

General

Course Subject Code
FREN

Course Number
102

Department
Languages And Cultures

Academic Level (Course Level)
Undergraduate

Course Description
Develops communicative language proficiency at the Novice-High and Intermediate-Low sublevels (according to ACTFL proficiency scale) as well as develops the ability to understand and appreciate French-speaking cultures. A communicative method is applied to develop the four language skills (reading, writing, speaking, and listening) in an intercultural content. This includes the use of authentic audio-visual materials introducing the French-speaking world, situational communicative practice in listening, speaking, reading and writing, and laboratory activities.

GERM101 - Elementary German I

General

Course Subject Code
GERM

Course Number
101

Department
Languages And Cultures

Academic Level (Course Level)
Undergraduate

Course Description
Initiates students development of the four language skills (speaking, listening, reading, writing) required to use the German language in a communicative context. Anticipated proficiency upon successful completion of the course is the Novice-Mid sublevel (based upon the American Council on the Teaching of Foreign Languages). Introduces students to features of German and German-speaking cultures that are associated with the targeted communicative activities.

Grade Modes
Credit/No Credit, Academic Forgivness, Pass/Fail, Standard Letter

GERM102 - Elementary German II

General

Course Subject Code
GERM

Course Number
102

Department
Languages And Cultures

Academic Level (Course Level)
Undergraduate

Course Description
Develops communicative language proficiency at the Novice-High and Intermediate-Low sublevels (according to ACTFL proficiency scale) as well as develops the ability to understand and appreciate German-speaking cultures. A communicative method is applied to develop the four language skills (speaking, listening, reading, writing) in an intercultural content. This includes the use of authentic audio-visual materials introducing the German-speaking world, situational communicative practice in listening, speaking, reading and writing, and laboratory activities.

Grade Modes

Additional Comments:

GERM204 - Intermediate German II

General

Course Subject Code
GERM

Course Number
204

Department
Languages And Cultures

Academic Level (Course Level)
Undergraduate

Course Description
Reinforces and expands the material covered in GERM102 (Introductory German II) or GERM203 (Intermediate German I) by utilizing a multi-skill approach: listening, speaking, reading, and writing. A key objective in this course is to encourage students to speak as much German in the classroom as possible. German language is taught in its cultural contexts, including history, literature, visual arts. The course develops communicative language proficiency at the Intermediate-Mid sublevel (according to ACTFL proficiency scale).

GRDS200 - Introduction to Graphic Design

General

Course Subject Code
GRDS

Course Number
200

Department
Visual Arts

Academic Level (Course Level)
Undergraduate

Course Description
Introduces design elements and principles through hands-on and digital techniques, applying current industry software applications. Assignments develop a working knowledge and understanding of the integration of form, typography, communication, and copyright standards, using the tools, techniques, and vocabulary inherent within the field. Observational skills and the ability to critically discuss, analyze, and articulate formal design aesthetics within a conceptual and historical framework are emphasized, along with creative problem-solving, communication strategies, experimentation, and personal expression.

GRDS201 - Typography

General

Course Subject Code
GRDS

Course Number
201

Department
Visual Arts

Academic Level (Course Level)
Undergraduate

Course Description
Explores the fundamental typographic structures within graphic design, including meaning, hierarchy, and context using grid structure, image and type relationships, and typographic history, function, and expression. Assignments develop an in-depth understanding and application of typography as a visual language -- incorporating tools, techniques, and vocabulary used within the field. Critical problem-solving skills, and the creative process, will be utilized in the conceptual and strategic development of applied projects.

Grade Modes
Credit/No Credit, Academic Forgivness, Pass/Fail, Standard Letter

Additional Comments:

GRDS202 - Typography & Logo Design

General

Course Subject Code
GRDS

Course Number
202

Department
Visual Arts

Academic Level (Course Level)
Undergraduate

Course Description
Examines principles of typography, logos, signs, symbols and icons. Students develop concepts, create projects focused on understanding typography and symbol foundations using current software applications, and exercise professional practices. Emphasis is on typographic hierarchy, typesetting, alignment, layout, color, research and critical thinking. Projects include but are not limited to type as image, typeface designer research, logo design, icon set design and typeface design. Studio sessions include lectures, presentations, tutorials, group exercises, and demonstrations.

GRDS282 - Letterpress

General

Course Subject Code
GRDS

Course Number
282

Department
Visual Arts

Academic Level (Course Level)
Undergraduate

Course Description
Investigates letterpress printing as a form of visual communication. Students learn and practice the medium's expressive potential, create various matrixes, use varied printing techniques, and are introduced to letterpress history, type anatomy, terminology, tools, and safety issues. Studio sessions include extensive work with printmaking materials, individual instruction and group critique, demonstrations, and lecture.

GRDS293 - Experimental Letterform

General

Course Long Title
Experimental Letterform

Course Subject Code
GRDS

Course Number
293

Department
Visual Arts

Academic Level (Course Level)
Undergraduate

Course Description
Investigates letterform as image through various modes of creation including, but not limited to, hand- or digital-drawing, painting, photography, sculpture, and projection. Focus on expression through experimentation is emphasized, along with the potential for enhanced meaning through applied context and application. Project prompts will be supplemented with lectures and discussions on historic and contemporary artists and designers using letterform as a medium of expression and communication.

GRDS311 - Brand Identity

General

Course Subject Code
GRDS

Course Number
311

Department
Visual Arts

Academic Level (Course Level)
Undergraduate

Course Description
Apply design process, strategy, tools, and technologies to the methodology of brand development, use, and management. Assignments utilize foundational skills of form, symbol creation, color, and typography to create the components of successful brand identity programs. The scope of work will include, but is not limited to, strategic name development, nomenclature systems, visual imagery, and verbal language that reflect brand essence and message.

HIST213 - Religion and Violence

General

Course Long Title
Religion and Violence

Course Subject Code
HIST

Course Number
213

Department
History, Poli Sci & Philosophy

Academic Level (Course Level)
Undergraduate

Course Description
Analyzes one of the most common oversimplifications associated with religious history: the idea that religion is inherently, historically violent. Students critically examine primary historical evidence from ancient, medieval, and modern documents on religious history around the globe and analyze authoritative "scriptural" religious texts that address the topic of violence and war. They will also consider portions of an array of laws, political treatises, speeches, recruitment literature, and propaganda-presenting interpretations of those allegedly authoritative religious texts.

HIST290 - Historical Methods

General

Course Subject Code
HIST

Course Number
290

Department
History, Poli Sci & Philosophy

Academic Level (Course Level)
Undergraduate

Course Description
Surveys how historians approach, analyze, and write about the past while developing habits of historical thinking. In this introductory seminar, students study and practice how to interpret the past with a critical perspective and independent thought. Classes address methods and techniques of historical research and writing, including the development of historical questions and skeptical analysis of historical sources. The course will also summarize the professionalization of the discipline and major interpretations of history.

HIST362 - Colonial Latin America

General

Course Long Title
Colonial Latin America

Course Subject Code
HIST

Course Number
362

Department
History, Poli Sci & Philosophy

Academic Level (Course Level)
Undergraduate

Course Description
Exposes students to the historical development of Latin America from its pre-Columbian beginnings, through its Spanish and Portuguese colonial transformation, ending with the wars of independence that created modern Latin American nations. Examines cultural, economic, political, and social changes that affected Latin America and its peoples through readings, film, images, lectures, and discussion, to develop an understanding of the diversity and complexity of ?Latin American? cultures and history until the early 19th century.

HIST377 - The American Woman

General

Course Long Title
The American Woman

Course Subject Code
HIST

Course Number
377

Department
History, Poli Sci & Philosophy

Academic Level (Course Level)
Undergraduate

Course Description
Focuses on the history of women in the United States from the early seventeenth century to the late twentieth century. During that time, conditions for American women have changed repeatedly and dramatically. We will discuss these changes as well as what has remained the same, focusing on social expectations, law, religion, the family, education, ethnicity, race, and work. Whenever possible, we will base our study on the records the women themselves left behind.

HLPE210 - Teaching Rhythmic Activities and Dance

General

Course Long Title
Teaching Rhythmic Activities and Dance

Course Subject Code
HLPE

Course Number
210

Department
Middle Level/Secondary/K-12 Ed

Academic Level (Course Level)
Undergraduate

Course Description
Introduces students to fundamental movement patterns, rhythms and dance included in PK-12 school curricula, emphasizing folk, line and square dancing. Students will discover and experience the relationship of aesthetic expression within these movement forms while performing and analyzing a variety of rhythmic and dance activities, including some dances that have been the tradition of many cultures. Emphasis will be placed on the teaching techniques specifically used for these movement patterns and dance focusing on use in grades PK-12 and for adult recreation. This course meets Pennsylvania state standards for physical education teacher education programs and the standards of the Society for Health and Physical Educators (SHAPE) necessary for national accreditation by the Council for the Accreditation of Educator Preparation (CAEP).

HLPE213 - Teaching Elementary Physical Education

General

Course Long Title
Teaching Elementary Physical Education

Course Subject Code
HLPE

Course Number
213

Department
Middle Level/Secondary/K-12 Ed

Academic Level (Course Level)
Undergraduate

Course Description
Prepares Health and Physical Education majors to plan, teach, and assess developmentally appropriate movement and physical activity learning experiences in elementary physical education. Students will learn and apply theories and concepts designed for teaching children to move efficiently, engage in sequential learning activities, and value physical activity. Students will engage in clinical teaching experiences as a part of the course. This course meets state and national standards for physical education teacher education programs.

HLSC202 - Care and Prevention of Physical Injury

General

Course Long Title
Care and Prevention of Physical Injury

Course Subject Code
HLSC

Course Number
202

Department
Health and Exercise Science

Academic Level (Course Level)
Undergraduate

Course Description
Exposes students to prevention techniques related to injuries and illness sustained during participation in physical activity. Students will develop skills necessary to interpret risk factors associated with participation as well as prevention and recognition of such conditions. Appropriate medical response and treatment options will be discussed.

Grade Modes

HLSC208 - Stress Management and Life Skills for Health Promotion

General

Course Long Title
Stress Management and Life Skills for Health Promotion

Course Subject Code
HLSC

Course Number
208

Department
Health and Exercise Science

Academic Level (Course Level)
Undergraduate

Course Description
Explores stress and its impact on wellness and health. Topics include causes of stress, physiological and psychological responses to stress, and stress-related diseases. Students will identify personal stressors and stress responses. Course emphasizes a holistic approach to managing stress, adopting effective coping mechanisms, and practicing relaxation techniques. Students will develop a stress management plan, lifelong skills to promote health, and an understanding of the impact of stress on personal health and future client health.

HLSC211 - Public Health, Social Justice, and Advocacy

General

Course Long Title
Public Health, Social Justice, and Advocacy

Course Subject Code
HLSC

Course Number
211

Department
Health and Exercise Science

Academic Level (Course Level)
Undergraduate

Course Description
Examines the social determinants of health and their impact on health inequities and health disparities. This course introduces social justice as a public health issue and explores historical and contemporary issues and theoretical frameworks related to health inequities. Students will examine personal, institutional, community, and policy level responses to these problems. The course will assist students in discovering their ability to create positive change in their world through advocacy, community organization, and collective action.

HLSC212 - Global Health Promotion

General

Course Long Title
Global Health Promotion

Course Subject Code
HLSC

Course Number
212

Department
Biological and Health Sciences

Academic Level (Course Level)
Undergraduate

Course Description
Introduces students to the broad and growing field of global health promotion. Students explore principles of global health, determinants of health, trends in health across the lifespan nationally and internationally, and organizations that shape public health and health promotion efforts in the United States and globally.

Grade Modes
Credit/No Credit, Academic Forgivness, Pass/Fail, Standard Letter

General

Course Long Title
Public Health and the Environment

Course Subject Code
HLSC

Course Number
218

Department
Health and Exercise Science

Academic Level (Course Level)
Undergraduate

Course Description
Provides an introduction for students to the fundamental concepts surrounding environmental and occupational health. Students will apply concepts in these areas to current environmental health issues including the following: population, risk assessment, policy generation and regulation, as well as the effects of environmental and occupational factors on human health.

HLSC307 - Cultural Aspects of Health

General

Course Long Title
Cultural Aspects of Health

Course Subject Code
HLSC

Course Number
307

Department
Health and Exercise Science

Academic Level (Course Level)
Undergraduate

Course Description
Explores race, ethnicity, and culture as constructs of health. Social determinants of health and their relationships with health status are also reviewed. The course is designed to enhance cultural awareness, cultural humility, and cultural competence when working with diverse populations within the United States.

General

Course Long Title
Psychological Considerations of Injury and Illness for Healthcare Providers

Course Subject Code
HLSC

Course Number
332

Department
Health and Exercise Science

Academic Level (Course Level)
Undergraduate

Course Description
Exposes students to the psychological aspects of injury, illness, and rehabilitation. The importance of interdisciplinary healthcare and treating the entire person is emphasized. Students are introduced to psychological factors that influence the rehabilitation process including, motivation, confidence, anxiety, and pain. Goal setting techniques, relaxation training, mental imagery, social support techniques, and pain management techniques are covered.

General

Course Long Title
Biomechanics of Injury

Course Subject Code
HLSC

Course Number
406

Department
Biological and Health Sciences

Academic Level (Course Level)
Undergraduate

Course Description
Provides students in health-related professions an investigation into the relationship between human biomechanics and musculoskeletal injury. The course examines the coordination of movement and the forces placed on various tissues of the body by physical activity, specifically in athletics and industrial work environments. Students explore various injury prevention and treatment interventions and are exposed to clinical problems in orthopedics, rehabilitation, and epidemiologic research.

HLSC498 - Professional Field Experience in Health Science

General

Course Long Title
Professional Field Experience in Health Science

Course Subject Code
HLSC

Course Number
498

Department
Undeclared

Academic Level (Course Level)
Undergraduate

Course Description
An immersive experience for students to on-site operations and test their potential and interest in the health science professions. Students will learn from professionals in the field and gain first-hand experience with: clinical/professional programs and procedures, interpersonal interactions with a variety of individuals, clinical/professional settings, clinical/professional expectations, and the daily roles and responsibilities of a professional in their chosen area of study. Supervision is provided by both university faculty and the cooperating agency.

HLSC515 - Pharmacology

General

Course Long Title
Pharmacology

Course Subject Code
HLSC

Course Number
515

Department
Health and Exercise Science

Academic Level (Course Level)
Graduate

Course Description
Presents common drugs used in a healthcare setting. Basic principles of pharmacology and medication are covered. Commonly prescribed drug groups are discussed, specifically addressing the drug's effects on physiology and disease.

General

Course Long Title
Applied Sport and Exercise Science

Course Subject Code
HLSC

Course Number
563

Department
Health and Exercise Science

Academic Level (Course Level)
Graduate

Course Description
Provides students the fundamentals of fitness assessment, exercise prescription, and sports nutrition from a Health Science perspective. Students will develop and apply the skills required to perform a fitness assessment and subsequent exercise prescription in the physically active population. Course content also includes the nutritional requirements for optimal exercise performance.

General

Course Long Title
Essentials of Human Anatomy and Physiology

Course Subject Code
HLTH

Course Number
122

Department
Health and Exercise Science

Academic Level (Course Level)
Undergraduate

Course Description
Provides an overview of normal structure and function of the human body at an introductory level to prepare students for advanced study. The laboratory component includes practical application of course content using the scientific method. Students will explore the integumentary; skeletal; muscular; nervous; cardiovascular; respiratory; digestion and metabolism; urinary; lymphatic and immune; endocrine and reproductive systems.

HLTH211 - Methods and Materials in PreK and Elementary School Health and Physical Education

General

Course Long Title
Methods and Materials in PreK and Elementary School Health and Physical Education

Course Subject Code
HLTH

Course Number
211

Department
Health and Exercise Science

Academic Level (Course Level)
Undergraduate

Course Description
Provides principles and procedures to meet the needs and interests of elementary-age children in the areas of health and physical education. The course is designed for non-Health and Physical Education majors and addresses elements of effective instruction, management, and assessment in health and physical education. Students will learn to integrate health content and physical activity when teaching other subjects. Students can expect to engage in physical activity during the teaching component of this course.

HNR175 - Training the Body and Mind

General

Course Subject Code
HNR

Course Number
175

Department
Honors

Academic Level (Course Level)
Undergraduate

Course Description
Guides students through their personal development as they prepare for the physical and mental challenges ahead. Students will study the effects of exercise on the body and their significance to lifelong health and well-being. Emphasis will be placed on the necessity for healthy nutrition to support physical activity and further contribute to health-fitness. The knowledge will be applied through laboratory activities to measure and track physical fitness as students explore various options for a physically active lifestyle. A particular focus will be how physical activity affects the mind, contributing to mental health and academic performance. The current literature in this realm will be searched and discussed. A culminating class research project will be based on critical analysis and student interest in this area. All students will submit at least one artifact to their Honors ePortfolio. Open to Honors students and others at the discretion of the Honors Program.

HPED115 - Teaching Invasion Sports 1

General

Course Long Title
Teaching Invasion Sports 1

Course Subject Code
HPED

Course Number
115

Department
Middle Level/Secondary/K-12 Ed

Academic Level (Course Level)
Undergraduate

Course Description
A methods course with a lab involving knowledge, fundamental skills, strategy and rules of soccer, football, and hockey. Emphasis is placed on skill learning, performance analysis, and progressions. This methods/lab course encompasses teaching methods, class management, and safety appropriate for all grade levels. Students will complete peer and self-evaluations.

HPED140 - Wellness for Life

General

Course Long Title
Wellness for Life

Course Subject Code
HPED

Course Number
140

Department
Middle Level/Secondary/K-12 Ed

Academic Level (Course Level)
Undergraduate

Course Description
Introduction to the interdependence of personal wellness and fitness. Students will gain the knowledge and skills necessary to develop a proactive approach to a wellness-oriented lifestyle. Emphasis will be placed on the development of a personal understanding of exercise options and their relevancy to health risk management. Students will also be introduced to health risk and fitness appraisal techniques.

HPED210 - Teaching Rhythmic Activities & Dance

General

Course Long Title
Teaching Rhythmic Activities & Dance

Course Subject Code
HPED

Course Number
210

Department
Middle Level/Secondary/K-12 Ed

Academic Level (Course Level)
Undergraduate

Course Description
Introduces students to fundamental movement patterns, rhythms and dance included in PK-12 school curricula, emphasizing folk, line and square dancing. Students will discover and experience the relationship of aesthetic expression within these movement forms while performing and analyzing a variety of rhythmic and dance activities, including some dances that have been the tradition of many cultures. Emphasis will be placed on the teaching techniques specifically used for these movement patterns and dance focusing on use in grades PK-12 and for adult recreation. This course meets Pennsylvania state standards for physical education teacher education programs and the standards of the Society for Health and Physical Educators (SHAPE) necessary for national accreditation by the Council for the Accreditation for Educator Preparation (CAEP).

General

Course Long Title
Professional Development

Course Subject Code
HPED

Course Number
400

Department
Middle Level/Secondary/K-12 Ed

Academic Level (Course Level)
Undergraduate

Course Description
Facilitate authentic learning experiences for pre-service health and physical education majors. Students observe and participate in school health and physical education settings, K-12. Students develop a professional portfolio supporting their experiences and professional philosophy. Community professionals and resources are used to complement the learning experience through the presentation of seminar-practicum related to current teaching tools each week. This course meets the National Association for Sport and Physical Education (NASPE) standards for accreditation.

IDT366 - Essential Skills for Technical Leaders

General

Course Long Title
Essential Skills for Technical Leaders

Course Subject Code
IDT

Course Number
366

Department
Tech/Analytic/Work Force Learn

Academic Level (Course Level)
Undergraduate

Course Description
Explores knowledge and methods used to improve self-management and provides an opportunity to apply concepts and skills obtained in prior courses to a team-based capstone project. The first of a 2-semester continuum, this course utilizes a study of individual preferences as a foundation for an exploration of communication, learning, and decision-making styles. Students will study and implement systems for managing information, time, activities, and goals. Guest speakers will present current issues in technical leadership.

IDT428 - Virtual, Augmented, and Mixed Reality

General

Course Long Title
Virtual, Augmented, and Mixed Reality

Course Subject Code
IDT

Course Number
428

Department
Tech/Analytic/Work Force Learn

Academic Level (Course Level)
Undergraduate

Course Description
Explores Virtual, Augmented, and Mixed Reality and discusses elements from the basics of each, hardware, and the history, to different applications, the psychology, and the challenges of each medium. The course is designed for people interested in pursuing emerging technologies to design learning. A learner with little to no previous experience in Virtual, Augmented, and Mixed Reality, or game programming, can evaluate existing applications, design, test, and implement their own learning experiences using specialized software.

Tech/Analytic/Work Force Learn

Academic Level (Course Level)
Graduate

Course Description
Examines the use of data and analytics to improve learning in educational and corporate settings. This course will provide an introduction to learning analytics and how they are being deployed in various contexts in the training and education field. Additionally, the tools, methods, ethics, privacy, and the systemic impact of analytics will be explored, presenting a broad overview of the current state and possible future directions of the field.

IDT550 - Instructional Design

General

Course Long Title
Instructional Design

Course Subject Code
IDT

Course Number
550

Department
Tech/Analytic/Work Force Learn

Academic Level (Course Level)
Graduate

Course Description
Examines the systems approach for the design, development, and evaluation of instruction and training materials. Students use an instructional design process to create a training prototype. Components of this project include a needs assessment, instructional analysis, objectives, instructional strategies, and the development of a teacher's guide and student materials. Specific emphasis is given to applying instructional design techniques to the design and development of instructional products.

General

Course Long Title
Advanced Instructional Design

Course Subject Code
IDT

Course Number
551

Department
Tech/Analytic/Work Force Learn

Academic Level (Course Level)
Graduate

Course Description
A follow-up to IDT 550 Instructional Design by providing additional information and practice concerning the design of effective instruction. Course goes beyond the introductory course by elaborating on the design of instructional strategies for specific learning outcomes, techniques for writing effective test items, and procedures for formative and summative evaluation. The course emphasizes learning theory, cognitive and behavioral approaches to instruction, comparison of instructional design models and research evidence that supports instructional design practices.

General

Course Long Title
Introduction to Authoring

Course Subject Code
IDT

Course Number
572

Department
Tech/Analytic/Work Force Learn

Academic Level (Course Level)
Graduate

Course Description
Acquaints students with authoring tools to develop training applications that may be implemented online and/or by mobile devices. Authoring software will be used to develop interactive simulations and training module frameworks. All coursework elements are reviewed and developed, emphasizing good design, programming techniques, and learner effort. Writing code for specific applications or deployment is not a requirement or any part of this course.

INT108 - FORENSICS PRACTICUM

General

Course Subject Code
INT

Course Number
108

Department
Interdisciplinary Studies

Academic Level (Course Level)
Undergraduate

Course Description
Provides students with the opportunity to learn various forms of debate, public speaking, and dramatic interpretation of literature. The ultimate goal of forensics participation is to help students become better communicators and to think critically. The Forensics Practicum will provide students with a valuable practical experience in a co-curricular activity that will assist any major in speaking situations. This will be accomplished through participation in competitive intercollegiate speech and debate tournaments. Grade awarded each semester. May be repeated. Prerequisites: None.

INT425 - Interdisciplinary Capstone Service Project

General

Course Long Title
Interdisciplinary Capstone Service Project

Course Subject Code
INT

Course Number
425

Department
Interdisciplinary Studies

Academic Level (Course Level)
Undergraduate

Course Description
Provides a culminating educational experience that will challenge students to use the knowledge, skills, and experiences that they gained from different courses to identify and address a multi-faceted "real world" issue related to their program of study. This course will be taught through the vehicle of Independent Study on an as-needed basis as the final course in the Interdisciplinary Studies Major. Students will consult with staff in the Office of Community Service and Employment (SOLVE), Center for Community Research and Consulting, or other campus advisor to ascertain opportunities to collaborate with the community on an appropriate project. This experiential learning project will afford students the opportunity to begin transitioning from school to career. Drawing upon past learning, students will apply their scholarship in a real world setting while developing a sense of professionalism and collaborating on a meaningful project with individuals already in the field. With the assistance of a collaborative mentor (i.e., the faculty advisor), the project will result in a learning portfolio that includes representative samples of accomplished work as well as a self-reflective narrative summarizing what, when, and how the student learned. Prerequisites: Permission of Instructor.

Course Description
A follow-up to INST550 (formerly INSTTECH550) Instructional Design by providing additional information and practice concerning the design of effective instruction. Course goes beyond the introductory course by elaborating on the design of instructional strategies for specific learning outcomes, techniques for writing effective test items, and procedures for formative and summative evaluation. The course emphasizes learning theory, cognitive and behavioral approaches to instruction, comparison of instructional design models and research evidence that supports instructional design practices.

General

Course Long Title
Technology Applications for the Classroom

Course Subject Code
INTC

Course Number
5542

Department
Inst Tech/Tech Ldrs/Info Tech

Academic Level (Course Level)
Graduate

Course Description
Explores the role and implementation of education-based technology applications in the classroom. Special emphasis is placed on integrating technology through the use of apps as a mind tool to achieve higher-order thinking. This course will also address the application of technology-based educational standards within the learning environment. Students become proficient in a wide range of educational technologies and apply skills of the instructional design process to their projects.

ISTD120 - Anti-Racism, Equity & Soc Resp

General

Course Subject Code
ISTD

Course Number
120

Department
Interdisciplinary Studies

Academic Level (Course Level)
Undergraduate

Course Description
Introduces an interdisciplinary approach to historical and current issues of race and racism in the United States using anti-Black racism as a framework. Students critically examine their personal views about race and consider their societal responsibility to promote racial equity for the common good. This foundational face-to-face course is intended for first-year students but open to all. Completion of course fulfills General Education Citizenship & Responsibility (Citizenship) requirement and counts towards the Black Studies Minor.

ITAL102 - Elementary Italian II

General

Course Subject Code
ITAL

Course Number
102

Department
Languages And Cultures

Academic Level (Course Level)
Undergraduate

Course Description
Develops communicative language proficiency at the Novice-High and Intermediate-Low sublevels (according to ACTFL proficiency scale) as well as develops the ability to understand and appreciate Italian-speaking cultures. A communicative method is applied to develop the four language skills (speaking, listening, reading, writing) in an intercultural content. This includes the use of authentic audio-visual materials introducing the Italian-speaking world, situational communicative practice in listening, speaking, reading and writing, and laboratory activities.

LACL350 - Second Language Teaching Methodology

General

Course Long Title
Second Language Teaching Methodology

Course Subject Code
LACL

Course Number
350

Department
Languages And Cultures

Academic Level (Course Level)
Undergraduate

Course Description
Introduces students to theories and methods associated with the effective teaching of second languages. Designed primarily for undergraduate students planning a career as second language teachers, but open to all students interested in learning the fundamentals of second language teaching and learning. Practices creating effective second language lesson plans and incorporating the second language proficiency assessment methods of the American Council on the Teaching of Foreign Languages (ACTFL). Students participate directly in second language instruction.

LATN101 - Elementary Latin I

General

Course Subject Code
LATN

Course Number
101

Department
Languages And Cultures

Academic Level (Course Level)
Undergraduate

Course Description
Initiates students' development of the four language skills (speaking, listening, reading, writing) required to use the Latin language in a communicative context. Anticipated proficiency upon successful completion of the course is the Novice-Mid sublevel (based upon the American Council on the Teaching of Foreign Languages). Introduces students to features of Latin and Mediterranean cultures that are associated with the targeted communicative activities.

LATN102 - Elementary Latin II

General

Course Subject Code
LATN

Course Number
102

Department
Languages And Cultures

Academic Level (Course Level)
Undergraduate

Course Description
Develops communicative language proficiency at the Novice-High and Intermediate-Low sublevels (according to ACTFL proficiency scale) as well as develops the ability to understand and appreciate Latin-speaking cultures. A grammar method is applied to develop the four language skills (speaking, listening, reading, writing) in an intercultural content. This includes the use of authentic audio-visual materials introducing the Latin-speaking world, situational communicative practice in listening, speaking, reading and writing, and laboratory activities.

LAWL336 - Legal Aspects Fraud

General

Course Subject Code
LAWL

Course Number
336

Department
Accounting & Business Law

Academic Level (Course Level)
Undergraduate

Course Description
Covers the practical, legal and ethical considerations involved in the conduct of a fraud examination addressing the rules of evidence and civil and criminal procedure; rules concerning proof of intent and obstruction of justice; and the major federal statutes relevant to fraud investigation. Professional standards of fraud examiners will be studied and, current cases examined. LAW231 is highly recommended, but not required.

LAWL340 - Law and Literature

General

Course Subject Code
LAWL

Course Number
340

Department
Accounting & Business Law

Academic Level (Course Level)
Undergraduate

Course Description
Explores legal themes from a literary perspective across a range of novels, essays, plays, and other narratives. Examines literary devices such as point of view, irony, allusion, and symbolism as well as rhetorical strategies to achieve a richer understanding. Provides legal, historical, and political context as necessary to discern the intention of the author, establish the characteristics of trials, contracts, wills, and other law-related concepts in literature, and compare them with contemporary legal climate.

LAWL360 - Employment Discrimination

General

Course Subject Code
LAWL

Course Number
360

Department
Accounting & Business Law

Academic Level (Course Level)
Undergraduate

Course Description
Explores discrimination and personal bias in general and in the employment context. Surveys major federal equal opportunity in employment laws and focuses on types of discrimination outlawed by Title VII of the 1964 Civil Rights Act, the Age Discrimination in Employment Act, and the Americans with Disabilities Act. Legal and ethical issues relating to affirmative action are discussed as well as state and local laws addressing employment discrimination and the advisability of further antidiscrimination regulation.

LAWL475 - Negotiation & Alt Dispute Res

General

Course Subject Code
LAWL

Course Number
475

Department
Accounting & Business Law

Academic Level (Course Level)
Undergraduate

Course Description
Examines the most commonly used forms of dispute resolution including negotiation, mediation, arbitration, and online methods. The examination includes the steps and procedures for each method, along with discussions of how to select the appropriate form. Course also includes a skill building component designed to improve each student's negotiation skills through the use of negotiation techniques, exercises and critiques of videotaped negotiation sessions.

LING111 - Language in the USA

General

Course Long Title
Language in the USA

Course Subject Code
LING

Course Number
111

Department
English

Academic Level (Course Level)
Undergraduate

Course Description
Examines linguistic diversity in the United States. Describes the history and current status of geographical and social varieties of American English. Familiarizes students with the wide range of other languages spoken in the United States, including American Indigenous languages, Spanish, American Sign Language, creoles, and a wide variety of immigrant languages. Identifies the links between language and identity and illustrates how to respond to linguistic prejudice. Involves students in sociolinguistic research.

General

Course Long Title
Secondary Math Methods 2

Course Subject Code
MAT

Course Number
316

Department
Math/Computer Sci/Dig Forensic

Academic Level (Course Level)
Undergraduate

Course Description
Provides the second in a two-course sequence of methods of teaching mathematics in grades 7-12. This course includes field experiences and practice teaching. The concentration in this course is on instructional strategies for specific content, the problems of practice, curriculum, unit and lesson planning, assessment, reading and writing strategies in mathematics, technology, diversity issues, adaptations for special needs, and professionalism. In addition to these, as the specific topics arise, the course helps students more deeply understand the mathematics concepts they will be teaching.

MATH101A - Math Thinking w/Recitation

General

Course Subject Code
MATH

Course Number
101A

Department
Math/Computer Sci/Dig Forensic

Academic Level (Course Level)
Undergraduate

Course Description
Presents mathematical topics and applications in a context designed to promote quantitative reasoning and the use of mathematics in solving problems and making decisions. It is suitable for majors in humanities and education and for others seeking a broad view of mathematics. This includes a 1-credit recitation aimed at providing just-in-time review of mathematical concepts in support of the content in MATH 101.

Grade Modes
Credit/No Credit, Academic Forgivness, Pass/Fail, Standard Letter

General

Course Long Title
Concepts of Arithmetic and Number Systems

Course Subject Code
MATH

Course Number
110

Department
Math/Computer Sci/Dig Forensic

Academic Level (Course Level)
Undergraduate

Course Description
Provides a survey of mathematics aimed at developing skills in the use of numbers, number patterns and operations with numbers for preservice teachers of grades pre K-4. Problem solving, sets and number systems are emphasized. Other topics covered are patterns and sequences, elementary number theory and historic number systems. Problem solving methods and manipulatives are used where appropriate.

MATH140 - Precalculus

General

Course Subject Code
MATH

Course Number
140

Department
Math/Computer Sci/Dig Forensic

Academic Level (Course Level)
Undergraduate

Course Description
A study of the concept of functions and several elementary algebraic functions and relations. The contents include properties and graphs of polynomial, exponential, logarithmic, trigonometric, and inverse functions, along with their applications. The material is treated with emphasis on both the development of concepts as well as the essential techniques needed for the study of calculus and the related quantitative natural sciences.

MATH150 - Essentials of Calculus

General

Course Subject Code
MATH

Course Number
150

Department
Math/Computer Sci/Dig Forensic

Academic Level (Course Level)
Undergraduate

Course Description
Presents the basic concepts of elementary calculus in a non-rigorous approach for students who are not mathematics majors. Pertinent topics in the real number system, analytic geometry, functions, and limits prepare the student for the study of the basic techniques of applications of differentiation and integration. The course is not for chemistry, mathematics, or physics majors. Students without sufficient algebra background should take MAT118 or MAT118A prior to taking this course.

MATH220 - History of Mathematics

General

Course Long Title
History of Mathematics

Course Subject Code
MATH

Course Number
220

Department
Math/Computer Sci/Dig Forensic

Academic Level (Course Level)
Undergraduate

Course Description
Presents the development of some major mathematical achievements throughout history. The course addresses both how mathematics has been developed throughout history and under what conditions it was developed. Emphasis is placed on great mathematicians, their contributions, and their methods of reasoning, including the contributions of underrepresented groups and diverse cultures. It is designed for math and math education majors, but it is suitable for students in any major.

MATH260 - College Geometry

General

Course Subject Code
MATH

Course Number
260

Department
Math/Computer Sci/Dig Forensic

Academic Level (Course Level)
Undergraduate

Course Description
Presents elementary geometry from an advanced standpoint using axiomatic, intuitive, analytic, and vector approaches. This course develops the skills of problem solving and precise thinking, and also prepares the student to teach geometry in a high school curriculum. Topics include incidence in the plane and in space, congruence, similarity, and properties of circles, polygons and spheres.

MATH270 - Calculus 3

General

Course Subject Code
MATH

Course Number
270

Department
Math/Computer Sci/Dig Forensic

Academic Level (Course Level)
Undergraduate

Course Description
Examines three-dimensional analytic geometry and vectors, vector-valued functions, vector calculus, partial derivatives, multiple integrals, Green's theorem, Stokes' theorem and their applications. The course is designed for students majoring in mathematics and other disciplines that require calculus. The third in a three-semester calculus sequence, this course examines differentiation and integration of vector-valued functions and functions of several variables.

MATH401 - Financial Math Actuarial Sci

General

Course Subject Code
MATH

Course Number
401

Department
Math/Computer Sci/Dig Forensic

Academic Level (Course Level)
Undergraduate

Course Description
Presents mathematical models in financial mathematics and interest theory, and how these concepts are applied in calculating present and accumulated values for various streams of cash flows as a basis for use in reserving, valuation, pricing, asset/liability management, investment income, capital budgeting, and valuing contingent cash flows. Financial instruments, including derivatives, and the concept of no-arbitrage are covered. This course covers materials for the second actuarial exam, Exam 2 ? Financial Mathematics (FM).

Course Description
Presents the rigorous mathematics of probability theory. There is a thorough treatment of discrete and continuous random variables, both univariate and multivariate, including traditionally discussed examples (including Binomial, Negative Binomial, Poisson, Normal, Gamma), properties of expected value, statistical independence, moment generating functions, and transformations of random variables. This course covers materials for the actuarial exam P (Probability).

Course Description
Presents a synthesis of mathematical methods utilized to model and solve real-world problems. The emphasis is on developing models that provide the means to analyze and answer questions posed in practical settings. Students will learn a problem-solving approach toward applied problems in optimization, dynamical systems, and stochastic processes. The course is intended for students in mathematics, statistics, and data science.

MBA500 - MBA Outcomes Assessment

General

Course Long Title
MBA Outcomes Assessment

Course Subject Code
MBA

Course Number
500

Department
ZCOB

Academic Level (Course Level)
Graduate

Course Description
The MBA Outcomes Assessment course is a zero-credit course. This course documents the College of Business' outcomes assessment policies #4310 for all MBA students. This policy states that all students enrolled in degree programs in the College of Business are required to fully and cooperatively participate in the outcome assessment activities of the College of Business or its departments. MBA 500 course will consist of two outcomes assessment exams; an entrance exam, which will be administered when students enter the MBA Program, and an exit exam, when students apply for graduation. Student participation in outcomes assessment activities supports compliance with AACSB accreditation standards. The results are collected and used for assessment purposes only.

MBA592 - MBA Practicum

General

Course Long Title
MBA Practicum

Course Subject Code
MBA

Course Number
592

Department
ZCOB

Academic Level (Course Level)
Graduate

Course Description
Creates an applied learning experience that integrates and expands upon the knowledge learned in the MBA Program. This core course serves as an experiential learning experience and will include either (a) an applied business report, (b) an approved internship, (c) a research paper, or (d) participation in a graduate practicum-approved course. Students are responsible for a written proposal, a final written report/paper of professional quality, and an oral presentation to relevant stakeholders. Graduate students should begin the practicum process at least the semester before they intend to take the course.

Department
Media and Journalism

Academic Level (Course Level)
Undergraduate

Course Description
Explores the history and foundational principles of emerging media, develops students' media and information literacy knowledge, and prepares them for an expanding technological society. Students will identify and explain media messages through their parts and their relation to each other and demonstrate an understanding of the concepts based on media analysis. The student will apply the media concept to a case or issue and determine its significance, value, and implications.

MILS104 - Leadership and Personal Development

General

Course Long Title
Leadership and Personal Development

Course Subject Code
MILS

Course Number
104

Department
MTSC

Academic Level (Course Level)
Undergraduate

Course Description
The purpose of this semester is to introduce cadets to fundamental components of service as an officer in the United States Army. These initial lessons form the building blocks of progressive lessons in values, fitness, leadership, and officership. Additionally, the semester addresses “life skills” including fitness, communications theory and practice (written and oral), and interpersonal relationships. Upon completion of this semester, the cadets should be prepared to receive more complex leadership instruction.

MRSC401 - Marine Ichthyology

General

Course Subject Code
MRSC

Course Number
401

Department
Biological and Health Sciences

Academic Level (Course Level)
Undergraduate

Course Description
Applies concepts of anatomy, physiology, behavior, and evolution to study diversity of fishes. This course will provide students with an introduction to the ecology and taxonomic classification of fishes. Lectures will emphasize evolution and classification of major fish lineages, general fish anatomy and physiology, natural history, and conservation. Labs will concentrate on sampling techniques, identification, and life history of fishes from the eastern shore.

Additional Comments:

MRSC402 - Biology of Mollusks

General

Course Subject Code
MRSC

Course Number
402

Department
Biological and Health Sciences

Academic Level (Course Level)
Undergraduate

Course Description
Explores field surveys, laboratory studies, and comparative physiology to survey molluscan biodiversity and understand the environmental factors that govern their distribution. Students will also study the socio-economic importance of ecological services provisioned by mollusks; which include biofiltration, climate resiliency, and food sustenance.

MRSC403 - Marine Ecology

General

Course Subject Code
MRSC

Course Number
403

Department
Biological and Health Sciences

Academic Level (Course Level)
Undergraduate

Course Description
Presents the principles and techniques for ecological studies in coastal marine environments. This course surveys population, community, ecosystem, and evolutionary ecology with marine applications in industry and conservation. Students gain experience with techniques for measuring physical habitat and organism distribution and abundance. Lectures are integrated with experiences to emphasize data collection, data entry, and data analysis. Students design and complete a research project that demonstrates the application of ecological skills.

MRSC501 - Marine Ichthyology

General

Course Subject Code
MRSC

Course Number
501

Department
Biological and Health Sciences

Academic Level (Course Level)
Graduate

Course Description
Applies concepts of anatomy, physiology, behavior, ecology, and evolution to study the diversity of fishes. This course will provide students with an introduction to the ecology and taxonomic classification of fishes. Lectures will emphasize evolution and classification of major fish lineages, general fish anatomy and physiology, natural history, and conservation. Labs will concentrate on sampling techniques, identification, and life history of fishes from the eastern shore.

MS1115 - Leadership and Personal Development

General

Course Long Title
Leadership and Personal Development

Course Subject Code
MS

Course Number
1115

Department
MTSC

Academic Level (Course Level)
Undergraduate

Course Description
This is an introductory course open to all students without obligation. It focuses on the military as a profession and examines its organization, ethics and values. The course explores the responsibilities and impact of leadership and the rules, customs and traditions of military service. Students are introduced to the fundamentals of land navigation, physical fitness, drill and ceremonies, first aid and public speaking.

MS3325 - Leadership in Changing Environments

General

Course Long Title
Leadership in Changing Environments

Course Subject Code
MS

Course Number
3325

Department
MTSC

Academic Level (Course Level)
Undergraduate

Course Description
Expands on the skills introduced in MS-3315 and incorporates increasingly challenging situations involving military technical, tactical and leadership skills. Advanced training in marksmanship and physical fitness is emphasized. Course culminates with several field training exercises where students are placed in simulated combat and evaluated on performance. Course is designed to bring cadets to peak proficiency in physical conditioning and leadership ability.

MSED515 - Teaching with Adolescent & Young Adult Literature

General

Course Long Title
Teaching with Adolescent & Young Adult Literature

Course Subject Code
MSED

Course Number
515

Department
Middle Level/Secondary/K-12 Ed

Academic Level (Course Level)
Graduate

Course Description
A graduate-level study of adolescent and young adult literature designed for those who use literature with adolescents for identity development. In addition to a critical advanced-level survey of print, digital, and visual media created for young adults, this course focuses on techniques for using these materials as springboards to develop fluency, build vocabulary and knowledge of text structures through structured literacy experiences at an advanced level. Additional graduate-level topics include incorporating engagement and motivation through extensive reading, discussion, applications and syntheses.

MUSI110 - Introduction to Music

General

Course Subject Code
MUSI

Course Number
110

Department
Music, Theatre, and Dance

Academic Level (Course Level)
Undergraduate

Course Description
Develops an ability to understand and enjoy Western Classical music. Students study principal vocal and instrumental music in Classical form from the Baroque period to the present time. World music, jazz, rock, or other popular genres are not covered in this course. Music reading skill is not required to succeed in this class and a variety of musical backgrounds and experiences is welcome.

MUSI111 - World Music

General

Course Long Title
World Music

Course Subject Code
MUSI

Course Number
111

Department
Music, Theatre, and Dance

Academic Level (Course Level)
Undergraduate

Course Description
Introduces students to a wide variety of music from a variety of cultures and environments. Enables students to develop broader intellectual and aesthetic perspectives on music that is not from their own culture(s) and environment(s) through interactions that include listening, analyzing, and interpreting. Encourages students to consider musical factors and interactions among cultures, use appropriate and authentic sources for musical considerations, and understand interrelationships among multiple perspectives when exploring music of the world.??

Undergraduate

Course Description
Provides music majors in the music technology area the opportunity to work on guided individual projects. These projects will be targeted to build upon skills learned in the music technology course sequence as well as the addition of new concepts that will enable the student to build a portfolio of work as an aid to future employment in the field.

MUSI460 - Song Literature

General

Course Long Title
Song Literature

Course Subject Code
MUSI

Course Number
460

Department
Music, Theatre, and Dance

Academic Level (Course Level)
Undergraduate

Course Description
Studies the development of monophonic song from the days of the troubadours and trouvères to the present. Emphasis is on the history of the German Lied, French chanson and mélodie, and solo song in the British Isles and the United States. Also includes the major composers of song in the Slavic countries, Spain, South America, and Scandinavia.

MUSI462 - Instrumental Literature

General

Course Long Title
Instrumental Literature

Course Subject Code
MUSI

Course Number
462

Department
Music, Theatre, and Dance

Academic Level (Course Level)
Undergraduate

Course Description
Studies standard literature in the performance repertoire of select instruments. Emphases on developing the skills to recognize works that are artfully crafted, exploring the origins of specific brass, woodwind, percussion, and string literature, and assessing the development and direction of current trends. Students will focus on the repertoire of their primary instrument and instrument family.

NRS210 - Professional Nursing

General

Course Subject Code
NRS

Course Number
210

Department
Nursing - Undergraduate

Academic Level (Course Level)
Undergraduate

Course Description
Introduces the student to the Bloomsburg University undergraduate nursing program and the concepts and processes of professional nursing with emphasis on written and oral communication, and information literacy skills as foundational elements in the discipline. The mission, philosophy, and conceptual model of the curriculum are defined and discussed. Major foundational elements and concepts of the nursing program are integrated into all aspects of the course. Students develop the view of person as a holistic open-system who is growing and developing across the life span. Exploration of the person's environment is included as related to nursing practice. Nursing roles are examined. Laboratory activities furnish opportunities to develop skills in information literacy, technology, written and oral communication including group dynamics, and teaching. Communication skills are continually applied as the student demonstrates the professional nursing and teaching roles with clients in the community. Two hours of lecture and three hours of clinical laboratory per week.

NRS217 - Alcohol: Use & Abuse

General

Course Subject Code
NRS

Course Number
217

Department
Nursing - Undergraduate

Academic Level (Course Level)
Undergraduate

Course Description
Provides a comprehensive overview of alcohol: its use and abuse. The nature of alcohol problems, causes and consequences of alcohol use, abuse and dependence in terms of epidemiological, physical, gender, psychological, sociological, treatment, and public policy perspectives are discussed. Controversial issues and myths regarding alcohol consumption are critically analyzed from health, ethical, moral, spiritual, sociocultural, legal and political frameworks. Opportunities for reflection on and examination of personal belief system about alcohol use within the context of personal and social responsibility are provided. Because alcohol abuse and dependence are leading public health and legal problems in the U.S., this course is intended for students in all disciplines.

NRS230 - Drug: Use & Abuse

General

Course Subject Code
NRS

Course Number
230

Department
Nursing - Undergraduate

Academic Level (Course Level)
Undergraduate

Course Description
Uses a multidimensional approach that emphasizes the confounding variables of biology, culture, family systems, to focus on critical issues relating to drug use and abuse. This course considers a variety of perspectives related to drugs and drug use - pharmacological, behavioral, historical, legal and clinical. The latest information on drugs, their effects on the human body and behavior, the family, and society is discussed. Substance abuse, substance dependence, intervention, referral and treatment are examined. Drug control policies, prevention, and legal aspects of drug use and abuse are explored. Opportunities for gathering and analyzing current information, and reflection on/examination of personal belief system about drug use and abuse within the context of personal and social responsibility are provided. Because drug use, abuse and dependence are leading public health and legal problems in the U.S., this course is intended for all majors.

NRS305 - Role Development Pro Nurse

General

Course Subject Code
NRS

Course Number
305

Department
Nursing - Undergraduate

Academic Level (Course Level)
Undergraduate

Course Description
Focuses on introducing the Registered Nurse to the conceptual basis and the role(s) of professional nursing. Students will apply concepts, principles, and a variety of theories derived from nursing and related disciplines in developing their professional roles as practitioner, educator, leader/manager, and consumer of evidence-based research. Insights derived from values clarification and self-awareness activities will be applied as students explore legal, ethical, political, and informatic issues in their own professional practice. Students will apply principles and strategies of effective communication and interprofessional practice as they work in collaboration with others in providing evidence-based, quality health care.

NRS306 - Intro Res & EBP in Nursing

General

Course Subject Code
NRS

Course Number
306

Department
Nursing - Undergraduate

Academic Level (Course Level)
Undergraduate

Course Description
Introduces students to the concepts, skills, processes, and role of research in nursing and evidence-based practice in order to facilitate their development as consumers of research and in cultivating a spirit of inquiry in clinical practice. Major emphases are placed on the contribution of research and evidence to the discipline and to the students' role in critically appraising evidence on which to base clinical decisions.

NRS310 - Family Nursing

General

Course Subject Code
NRS

Course Number
310

Department
Nursing - Undergraduate

Academic Level (Course Level)
Undergraduate

Course Description
Focuses on culturally congruent nursing care of the family in present day society. Students are introduced to theory and concepts related to family health care nursing. The family nursing process is used to identify culturally appropriate health promotion and health maintenance strategies as well as social determinants resulting in health disparities. Assessment and analysis of sociocultural, economic, spiritual, and environmental factors on the family's health functions, perceptions, interpretations, and behaviors are explored.

NRS314 - Nursing Care of Older Adults

General

Course Subject Code
NRS

Course Number
314

Department
Nursing - Undergraduate

Academic Level (Course Level)
Undergraduate

Course Description
Provides a comprehensive overview of the unique health care needs of the older adult. The target audience for this course is junior-level baccalaureate nursing students also enrolled in the Adult Health One (NURSING 311) course. The focus is on development of competency in providing evidence-based health care to older adults and their families across the continuum of health care settings. Attention is given to the complexity of acute and chronic conditions and geriatric syndromes, recognition of risk factors, valid assessment processes, and the development of individualized care. The importance of interdisciplinary collaboration is addressed. Factors influencing the aging process such as age related physical changes, gender, race, culture, spirituality, roles, relationships, lifestyle, and societal beliefs are discussed. Controversial issues and myths related to aging, elder care, and death are critically analyzed from developmental, ethical, moral, spiritual, sociocultural, legal, and health care policy frameworks for impact on aging and wellness.

NRS410 - Public Health Nursing

General

Course Long Title
Public Health Nursing

Course Subject Code
NRS

Course Number
410

Department
Nursing - Undergraduate

Academic Level (Course Level)
Undergraduate

Course Description
Focuses on the use of demography, biostatistics, epidemiology, and population assessment to promote the health of individuals, aggregates, and populations. Participation in aggregate and population-focused activities such as assessment, planning, and implementation is cultivated. Collaboration with others to implement evidenced-base strategies for clinical prevention of illness, injury, disability, and premature death is advanced. Role development will be fostered through independent and interdependent activities with groups and organizations providing care with attention to health disparity, vulnerability, and culturally diverse populations. May be offered in traditional and distance education formats.

Course Description
Focuses on providing care for adult clients with complex needs. Students employ critical thinking to problem-solving and make decisions. Student use nursing process, therapeutic skills and technology in assisting these clients to attain an optimal level of functioning. They collaborate with clients and the interdisciplinary team to promote, maintain and restore optimal health to a variety of clients. Learning experiences provide opportunities for students to develop proficiency as a practitioner, teacher, leader/manager, and consumer of research. The course promotes integration of values into professional behaviors and accountability for personal and professional growth. Three hours Theory and twelve to sixteen hours clinical per week.

Department
Nursing - Undergraduate

Academic Level (Course Level)
Undergraduate

Course Description
Provide students with a global perspective of transcultural health issues. Students will analyze the cultural, social, educational, economic, political, and environmental forces that contribute to health on an international level. Major cultural and ethnic determinants of health in developed and developing countries will be compared. Approaches used by diverse cultures in various countries in solving their health care problems will be addressed. Research on transcultural health issues will be examined. The role of major international health organizations dealing with cultural and ethical issues in world health will be evaluated.

NRS501 - Theoretical Bases for Role Development in Advanced Nursing Practice

General

Course Long Title
Theoretical Bases for Role Development in Advanced Nursing Practice

Course Subject Code
NRS

Course Number
501

Department
Nursing - Graduate

Academic Level (Course Level)
Graduate

Course Description
Focuses on the examination of philosophical and theoretical constructs related to role development in advanced nursing practice. Advanced practice domains of clinical practice, teaching and coaching, consultation, intra and inter-professional collaboration, care coordination, conflict resolution, research, nursing theory, leadership, quality improvement, advocacy, and ethical decision-making are explored. The reciprocal interrelationships among theory, theoretical frameworks and conceptual models, domains of practice, and research as integral components of nursing science development, evidence-based advanced nursing practice, education, and leadership are investigated. Theory development and strategies for the evaluation and testing of theories are explored. The student will identify concepts, principles and strategies inherent in a variety of nursing and related theories, (i.e., systems, change, professional socialization, leadership, chaos, complexity, organizational, etc.) to serve as a framework for the development and enrichment of own advanced practice roles. The student will analyze and apply the tenets of a conceptual model or theory of nursing to own philosophy of advanced nursing practice and potential practice issues/situations.

General

Course Long Title
Epidemiology: Concepts & Principles for Advanced Nursing Practice

Course Subject Code
NRS

Course Number
502

Department
Nursing - Graduate

Academic Level (Course Level)
Graduate

Course Description
Provides a conceptual orientation and knowledge of techniques from epidemiology as a basis for all aspects of population-based practice in advanced nursing. The epidemiological perspective is presented as a framework for assessing the well-being of populations and designing, implementing, and evaluating strategic nursing and healthcare interventions. Students will apply basic epidemiological research designs in the investigation, analysis, and proposed solutions to observed patterns of health states.

General

Course Long Title
Bases for Research for Advanced Nursing Practice

Course Subject Code
NRS

Course Number
503

Department
Nursing - Graduate

Academic Level (Course Level)
Graduate

Course Description
Provides a deeper understanding and critical appraisal of nursing research for application to evidence-based practice. Application of the steps of evidence based nursing practice is stressed. The proper formulation of Population Intervention Comparison Outcome Time (PICOT) questions, learning how to search relevant databases for evidence, critically appraising the evidence, and synthesizing the research findings are all emphasized. Development of a plan for implementation of the evidence and/or for generating additional evidence to improve nursing practice is addressed.

General

Course Long Title
Diagnosis and Management of the Adult and Aged I

Course Subject Code
NRS

Course Number
515

Department
Nursing - Graduate

Academic Level (Course Level)
Graduate

Course Description
Focuses on the diagnosis and management of health problems in young adults (including late adolescents and emancipated minors), adults, and older adults (including young-old and old-old adults) in the primary care setting. Emphasis is placed on developing knowledge related to the most common diagnoses and health problems across the entire adult-older adult age spectrum in primary care. These include, but are not limited to, cardiac, respiratory, endocrine, mental health, and renal diagnoses and problems. In addition, the course addresses issues related to the role of the nurse practitioner and provides opportunities to discuss these as the student begins the transition to this advanced practice nursing role in primary care.

Course Description
Provides students with the knowledge and skills to perform a comprehensive community assessment and develop a program for an identified health need of a population. Students will use concepts from nursing theory, epidemiology, cultural principles, and evidence-based practice research to identify a community population need, develop a proposed solution and plan of intervention to reach an improved health outcome. The preparation of a grant proposal to address the community/population need will be a major focus of the intervention.

Department
Nursing - Graduate

Academic Level (Course Level)
Graduate

Course Description
Prepares the advanced practice nurse for provision of comprehensive, quality, and cost effective primary care for older adults. Theories of physical aging, normal physical changes of aging, psychosocial needs, and the economic, political, socio-cultural, legal, and ethical issues of aging will be explored. Through both the theory component and clinical practicum the student will learn to recognize, evaluate, and manage geriatric syndromes prevalent in the older adult population. Atypical presentation of illness and clinical issues unique to frail older adults will also be explored.

NRS531 - Health Promotion and Prevention with Populations and Aggregate

General

Course Long Title
Health Promotion and Prevention with Populations and Aggregate

Course Subject Code
NRS

Course Number
531

Department
Nursing - Graduate

Academic Level (Course Level)
Graduate

Course Description
Focuses on the development of advanced population health nursing knowledge and collaboration practice skills essential to integrating theoretical and practice frameworks, and diverse perspectives when designing and implementing health promotion and prevention programs. The graduate student applies epidemiology, community assessment, critical thinking, communication skills, evidence-based population interventions and public health values to plan, implement, and evaluate health promotion and prevention programs for populations and aggregates. The student functions independently and in collaboration with other public health professionals and clients in diverse settings to plan and develop innovative programs designed to meet identified health needs of populations and aggregates. A clinical practicum of 200 hours is required.

Department
Nursing - Graduate

Academic Level (Course Level)
Graduate

Course Description
Provides an opportunity for the student to apply knowledge gained throughout the program while gaining entry-level competence in the clinical area. Both clinical and professional role issues are addressed in the theory seminar. Clinical issues will include management of complex patients. Professional issues to be addressed will include assessment of organizations as practice settings, quality of care and risk management, and professional responsibilities of practice. These issues include the influence of, and on, health policy, continuing education, the health education of the community, and clinical research. The focus of the course throughout is on developing confidence and competence as an adult/gerontology primary care nurse practitioner.

Graduate

Course Description
Beginning in the senior year, students are assigned to a specific surgical specialty service, on a rotating basis, where the focus is on those aspects of anesthesia nursing care particular to that specialty. Clinical conferences will focus on specialty service case reviews, mortality and morbidity reviews, and case presentations. A journal club will be a component part of the clinical conference related to surgical specialty topics.

General

Course Long Title
Family Primary Care Nurse Practitioner Practicum and Seminar

Course Subject Code
NRS

Course Number
541

Department
Nursing - Graduate

Academic Level (Course Level)
Graduate

Course Description
Provides the student an opportunity to apply knowledge gained throughout the program while gaining entry-level competence in the clinical area. Both clinical and professional role issues within the context of the family are addressed. This is the concluding course for the family primary care nurse practitioner program. Clinical issues will include management of complex patients across the lifespan. Professional issues to be addressed will include assessment of organizations as practice settings, quality of care and risk management, and professional responsibilities of practice in relation to the family as a unit of care. These issues include the influence of, and on, health policy, continuing education, the health education of the family and community, and clinical research. The focus of the course throughout is on developing confidence and competence as a family primary care nurse practitioner.

General

Course Long Title
Transcultural Health Issues

Course Subject Code
NRS

Course Number
551

Department
Nursing - Graduate

Academic Level (Course Level)
Graduate

Course Description
Provide students with a global perspective of transcultural health issues. Students will analyze the cultural, social, educational, economic, political, and environmental forces that contribute to health on an international level. Major cultural and ethnic determinants of health in developed and developing countries will be compared. Approaches used by diverse cultures in various countries in solving their health care problems will be addressed. Research on transcultural health issues will be examined. The role of major international health organizations dealing with cultural and ethical issues in world health will be evaluated.

NRS600 - DNP Immersion: Transition Into DNP Role

General

Course Long Title
DNP Immersion: Transition Into DNP Role

Course Subject Code
NRS

Course Number
600

Department
Nursing - Graduate

Academic Level (Course Level)
Graduate

Course Description
Explores the role of the DNP in clinical practice. Provides opportunity for personal reflection and identification of clinical strengths and professional interests. Examines best practice approaches and consequences and begins to identify barriers that interfere with the delivery of equitable evidenced- based care in their population area. Introduction to the online learning platform and information research techniques. May be offered in traditional and distance education formats.

NRS601 - Informatics and Technology as Applied to Advance Practice Nursing

General

Course Long Title
Informatics and Technology as Applied to Advance Practice Nursing

Course Subject Code
NRS

Course Number
601

Department
Nursing - Graduate

Academic Level (Course Level)
Graduate

Course Description
Introduces and explores information technology resources in varied settings, which are intended to improve the quality of patient care and the health systems in which care is delivered. The examination of the role of technology in ethical implications for patients, evidenced-based practice, the advanced practice nurse as a technology leader, and the use of technology in clinical decision-making will occur. Students will acquire skills in the management of individual and aggregate level information utilizing advanced technology in the health care arena, and then generate evidence for practice and monitor health and population outcomes in their area of specialized practice. Emphasis will be placed on technologies that assist in planning and evaluating health programs and interventions that improve patient outcomes. May be offered in traditional and distance education formats.

General

Course Long Title
Evidence-Based Clinical Project II: Implementation

Course Subject Code
NRS

Course Number
609

Department
Nursing - Graduate

Academic Level (Course Level)
Doctoral

Course Description
Focuses on the continued refinement of an evidence-based clinical project. The student obtains final departmental and IRB approval. Implementation of an approved clinical project utilizing current evidenced-based practice. Particular attention will be directed at the analysis and evaluation of the transformation of the student's practice. Course enhances student's ability to translate evidence-based research and clinical scholarship to decrease risk and improve patient outcomes.

NUR1100 - Found of Professional Nursing

General

Course Subject Code
NUR

Course Number
1100

Department
Nursing - Undergraduate

Academic Level (Course Level)
Undergraduate

Course Description
This course introduces first-year students to the profession of nursing. The course has two separate goals: providing a basis for academic achievement and helping students develop skills necessary for professional success. Students learn about diversity issues, examine what it means to be a college student, explore what it means to be a professional, and develop strategies for success. Discussion of the importance of a strong liberal arts foundation as the basis of professional study is an integral part of the course. Professional concepts such as communication skills, basic medical language, legal, ethical, and professional issues are introduced. This course is for nursing majors only.

A minimum grade of 'D-' in Course MAT107

Earn a minimum grade (Undergraduate) of D- in the following:

Additional Comments:

NURS103 - Nursing 1

General

Course Subject Code
NURS

Course Number
103

Department
Nursing - Undergraduate

Academic Level (Course Level)
Undergraduate

Course Description
Introduces students to nursing practice emphasizing assessment of basic needs of individuals and families and providing nursing care based on the nursing process. Integration of knowledge and application of critical thinking into the primary care of the individual with acute and chronic health problems across the lifespan is stressed. Students begin to develop knowledge, skills, attitudes/values, and abilities to achieve end-of-program student learning outcomes. This course includes a clinical component of 6 hours per week.

NURS203 - Essentials of Professional Nursing

General

Course Long Title
Essentials of Professional Nursing

Course Subject Code
NURS

Course Number
203

Department
Nursing - Undergraduate

Academic Level (Course Level)
Undergraduate

Course Description
Introduces students to the professionalism and professional values of nursing. Prepares nursing students to utilize the nursing process and clinical judgement model in implementing nursing skills and nursing technologies when caring for patients across the life-span. Professional concepts such as scope of practice; communication skills, legal; ethical, and professional issues; professional identity and resiliency; and patient safety are introduced through classroom and laboratory activities.

NURS300 - Adult Health I

General

Course Subject Code
NURS

Course Number
300

Department
Nursing - Undergraduate

Academic Level (Course Level)
Undergraduate

Course Description
Introduces topics and skills associated with the acute and chronic healthcare needs of adults. Students apply developmental theory, core educational competencies, and basic principles of the clinical judgment measurement model to prioritize nursing care for adult patients. Students will continue to develop knowledge, skills, and attitudes that are essential for safe nursing practice. Students will collaborate with the intra and interprofessional health care team while increasing independence as a professional nurse.

NURS301 - Principles of Nursing Research and Evidence-base Practice

General

Course Long Title
Principles of Nursing Research and Evidence-base Practice

Course Subject Code
NURS

Course Number
301

Department
Nursing - Undergraduate

Academic Level (Course Level)
Undergraduate

Course Description
Provides students with a foundational understanding of the research process and evidence-based practice in nursing. Students focus on the theoretical basis of research methodology and strategies to analyze, critique, and interpret nursing research. Emphasis is placed on the role of research in nursing and evidence-based practice to facilitate their development as consumers and participants of research to advance the knowledge of nursing.

NURS302 - Obstetrics and Newborns

General

Course Subject Code
NURS

Course Number
302

Department
Nursing - Undergraduate

Academic Level (Course Level)
Undergraduate

Course Description
Provides a comprehensive overview of the distinctive health care needs of pregnant persons and newborns. Focus is on the nursing care of childbearing persons and their families through pregnancy, birth, and the six weeks after birth. Focus of the newborn explores their behavioral and physiologic adaptations to extrauterine life. Students use critical thinking, effective communication skills, information and technology, and assessment findings to provide safe, evidence-based nursing care to pregnant persons, neonates, and their families.

Course Description
Provides the fundamentals of pharmacokinetic and pharmacodynamic properties of drugs across the lifespan affecting all body systems. Prescribing and monitoring procedures for various disease states are presented. Classification of pharmaceuticals, indications for use, and drug efficacy are reviewed. Rationales for drug therapy based on the physiologic factors of disease processes and drug mechanisms will be discussed. Adverse reaction, interactions, nutritional, developmental problems, and health status will be explored. Legality of prescriptive privileges, and patient teaching are addressed.

Course Description
Focuses on developing the student's competence in performing health/physical assessment across the lifespan. Emphasis is placed on the importance of communication and observational skills in conducting a holistic assessment for the purpose of developing a thorough understanding of the individual to determine appropriate and effective health care, including health promotion and interventional strategies across the lifespan. This assessment includes genetic, social, environmental, functional, cultural, spiritual, psychosocial, developmental and comprehensive physical examination

Course Description
Provides students with knowledge and skills to perform a comprehensive community assessment and develop a program for an identified health need of a population. Students will use concepts from nursing theory, epidemiology, cultural principles and evidence-based practice research to identify a community population need, develop a proposed plan of intervention to reach an improved health outcome. Preparation of a grant proposal to address the community/population need will be a major focus of this intervention.

NURS521 - Nurse as Health Educator in the School Setting

General

Course Long Title
Nurse as Health Educator in the School Setting

Course Subject Code
NURS

Course Number
521

Department
Nursing - Undergraduate

Academic Level (Course Level)
Graduate

Course Description
Focuses on the application of principles of health promotion and health education within the school system. Theoretical content builds on learning theories appropriate to the school age child and families. Provides the information necessary for the school nurse to assess the health education needs of school students, families and school personnel; to plan a specific health program; and, to identify mechanisms for implementation within a school system.

General

Course Long Title
Family Theory Across the Lifespan

Course Subject Code
NURS

Course Number
522

Department
Nursing - Undergraduate

Academic Level (Course Level)
Graduate

Course Description
Provides a broad, systematic perspective on human functioning through analysis and comparison of models and theories of family health and family nursing. Concepts are then applied to the understanding and assessment of the stages of the normal life-cycle from a multi-cultural, multi-generational perspective upon which to base clinical practice. Students will apply family system concepts and methods related to health and illness faced by families including physical and/or mental health problems.

General

Course Long Title
Comprehensive Primary Care of Older Adults

Course Subject Code
NURS

Course Number
529

Department
Nursing - Graduate

Academic Level (Course Level)
Graduate

Course Description
Prepares the advanced practice nurse for provision of comprehensive, quality, and cost effective primary care for older adults. Theories of physical aging, normal physical changes of aging, psychosocial needs, and the economic, political, socio-cultural, legal, and ethical issues of aging will be explored. Through both the theory component and clinical practicum the student will learn to recognize, evaluate, and manage geriatric syndromes prevalent in the older adult population. Atypical presentation of illness and clinical issues unique to frail older adults will also be explored.

NURS531 - Health Promotion & Prevention

General

Course Subject Code
NURS

Course Number
531

Department
Nursing - Graduate

Academic Level (Course Level)
Graduate

Course Description
Focuses on the development of advanced population health knowledge and collaborative practice skills to integrate theoretical and practice frameworks, when designing and implementing health promotion and prevention programs. Application of epidemiology, community assessment, critical thinking, communication skills, evidence-based population interventions to plan, implement, and evaluate preventative health programs are performed. Students function independently and collaboratively with other public health professionals and clients in diverse settings to develop innovative programs designed to meet health needs of populations and aggregates. A clinical practicum of 180 hours is required.

NURS536 - Anesthesia Nursing Practicum and Clinical Conference II

General

Course Long Title
Anesthesia Nursing Practicum and Clinical Conference II

Course Subject Code
NURS

Course Number
536

Department
Nursing - Undergraduate

Academic Level (Course Level)
Graduate

Course Description
Continues with the development of skills and knowledge related to nurse anesthesia. Through individually supervised instruction, the student utilizes the knowledge and skills related to anesthesia and advanced practice nursing in the delivery of patient care. Clinical case conferences will focus on the presentation of case studies and the discussion of patient outcomes. A journal club will be a component part of this clinical conference.

NURS551 - Transcultural Health Issues

General

Course Long Title
Transcultural Health Issues

Course Subject Code
NURS

Course Number
551

Department
Nursing - Undergraduate

Academic Level (Course Level)
Graduate

Course Description
Provide students with a global perspective of transcultural health issues. Students will analyze the cultural, social, educational, economic, political, and environmental forces that contribute to health on an international level. Major cultural and ethnic determinants of health in developed and developing countries will be compared. Approaches used by diverse cultures in various countries in solving their health care problems will be addressed. Research on transcultural health issues will be examined. The role of major international health organizations dealing with cultural and ethical issues in world health will be evaluated.

NURS600 - DNP Immersion: Role Transition

General

Course Long Title
DNP Immersion: Role Transition

Course Subject Code
NURS

Course Number
600

Department
Nursing - Undergraduate

Academic Level (Course Level)
Doctoral

Course Description
Explores the role of the DNP in clinical practice. Provides opportunity for personal reflection and identification of clinical strengths and professional interests. Student examines best practice approaches and their consequences and begins to identify barriers that interfere with the delivery of equitable evidenced- based care in their population area. Introduction to the online learning platform and information research techniques.

NURS601 - Informatics & Technology as Applied to Advance Practice Nursing

General

Course Long Title
Informatics & Technology as Applied to Advance Practice Nursing

Course Subject Code
NURS

Course Number
601

Department
Nursing - Undergraduate

Academic Level (Course Level)
Doctoral

Course Description
Introduces and explores information technology resources in varied settings which are intended to improve the quality of patient care and the health systems. The examination of the role of technology in ethical implications for patients, evidenced-based practice, the advanced practice nurse, and the use of technology in clinical decision making will occur. Students will acquire skills in the management of individual and aggregate information utilizing advanced technology in the health care arena, and then generate evidence for practice and monitor health and population outcomes in their area of specialized practice. Emphasis will be placed on technologies that assist in planning and evaluating health programs and interventions that improve patient outcomes.

NURS606 - Biomedical Ethics and Vulnerable Populations

General

Course Long Title
Biomedical Ethics and Vulnerable Populations

Course Subject Code
NURS

Course Number
606

Department
Nursing - Undergraduate

Academic Level (Course Level)
Doctoral

Course Description
Examines moral dilemmas created or intensified by recent scientific advances in medicine and study ways of analyzing those dilemmas to make them more tractable. Emphasis will be placed on how ethical dilemmas impact those most vulnerable in the general population. Students will identify vulnerable populations and analyze multiple factors that contribute to vulnerability. Field experience and seminar discussions will focus on strategies to promote wellness in families, communities, and populations. 25 hours of applied practicum.

General

Course Long Title
Evidence-Based Clinical Project II: Implementation

Course Subject Code
NURS

Course Number
609

Department
Nursing - Undergraduate

Academic Level (Course Level)
Doctoral

Course Description
Focuses on the continued refinement of an evidence-based clinical project. The student obtains final departmental and IRB approval. Implementation of an approved clinical project utilizing current evidenced-based practice. Particular attention will be directed at the analysis and evaluation of the transformation of the student's practice. Course enhances student's ability to translate evidence-based research and clinical scholarship to decrease risk and improve patient outcomes. 125 hours of applied practicum hours.

NURS640 - Advanced Anesthesia Nursing Practicum and Clinical Conference III

General

Course Long Title
Advanced Anesthesia Nursing Practicum and Clinical Conference III

Course Subject Code
NURS

Course Number
640

Department
Nursing - Undergraduate

Academic Level (Course Level)
Doctoral

Course Description
Emphasizes the development of an independent practitioner who can assume a leadership role as a member of the anesthesiology community. Performance improvement measures are addressed in this last practicum course. To enhance the scholarly development of the student, additional time is spent on an area of interest with the expectation that meaningful clinical research will be conducted. An evidence-based practice issue will be explored and will culminate in a paper submitted for publication and a professional presentation. An additional focus of this course is on preparation for the National Certification examination.

NUTR200 - Introduction to Nutrition

General

Course Long Title
Introduction to Nutrition

Course Subject Code
NUTR

Course Number
200

Department
Health and Exercise Science

Academic Level (Course Level)
Undergraduate

Course Description
Introduces the student to the science of nutrition, factors related to the nutrient needs of the body, and the foods that meet these needs. It also examines how good nutrition plays a role in the health of the individual. Healthy and diseased states related to nutrition will be discussed in this course. This course supports standards of the Accreditation Council for Education in Nutrition and Dietetics and is taught by a Registered Dietitian-Nutritionist (RDN).

PHIL201 - Deductive Logic

General

Course Long Title
Deductive Logic

Course Subject Code
PHIL

Course Number
201

Department
History, Poli Sci & Philosophy

Academic Level (Course Level)
Undergraduate

Course Description
Examines forms of argumentation and formal reasoning, including categorical syllogisms and propositional logic. Logic is a fundamental tool of philosophical inquiry. It is necessary for legal reasoning, foundational to mathematics and computer science, and important in linguistics, psychology, artificial intelligence, and cognitive science, This course provides an introduction to symbolic notation and the use of truth tables, and is useful for students taking the LSAT.

PHIL401 - Philosophy of Mind

General

Course Long Title
Philosophy of Mind

Course Subject Code
PHIL

Course Number
401

Department
History, Poli Sci & Philosophy

Academic Level (Course Level)
Undergraduate

Course Description
Explores key theories central to our understanding of mentality: mind/body dualism, Identity Theory, Functionalism, Eliminativism, the Representational Theory of Mind, and the Intentional Stance. Compares and contrasts each theory, considering both the implications of their adoption, and what application looks like for different cases such as consciousness in nonhuman animals, brain disease or damage, and the impact on our conception of free will.

PHIL406 - Metaphysics

General

Course Long Title
Metaphysics

Course Subject Code
PHIL

Course Number
406

Department
History, Poli Sci & Philosophy

Academic Level (Course Level)
Undergraduate

Course Description
Offers an in-depth exploration of metaphysics, a core subfield of philosophy since Aristotle. Examines the nature of properties, the relationship between properties and objects, what it takes for some things to be parts and compose wholes, the nature of time, necessity and possibility, and how objects can persist despite change.

PHIL501 - Professional Bioethics

General

Course Long Title
Professional Bioethics

Course Subject Code
PHIL

Course Number
501

Department
History, Poli Sci & Philosophy

Academic Level (Course Level)
Graduate

Course Description
Provides students with an overview of key issues and approaches in contemporary bioethics. The course will review prominent ethical theories and principles and show how they are helpful in understanding and addressing moral dilemmas. The course focus will be on ethical concerns that arise in the clinical or research practice of working medical professionals. Students will learn reason-based approaches to solving ethical concerns in practical scenarios.

PHS103 - Principles of Physical Science I

General

Course Long Title
Principles of Physical Science I

Course Subject Code
PHS

Course Number
103

Department
Biochem/Chem/Engineer/Physics [BiCEP]

Academic Level (Course Level)
Undergraduate

Course Description
Provides an introduction to the basic concepts of physical science by studying such topics as the structure and properties of matter, motion and forces, energy, light and sound, electricity and magnetism, and astronomy. It is designed for elementary education and special education majors. Four hours of integrated class/laboratory time per week.

General

Course Long Title
Advanced Physics Lab

Course Subject Code
PHS

Course Number
400

Department
Biochem/Chem/Engineer/Physics [BiCEP]

Academic Level (Course Level)
Undergraduate

Course Description
Presents the basic tenets of lab work in physics, involving considerations of experimental error, proper research and preparation of an experiment. Includes experiments primarily from the areas of atomic physics, electricity, magnetism and optics. 3 laboratory hours per week. Prerequisites: PHYSICS.310.

Instructional Method / Attendance Policy

PHYA501 - Medical Decisions

General

Course Subject Code
PHYA

Course Number
501

Department
Physician Associate Studies

Academic Level (Course Level)
Graduate

Course Description
Explores the many influences in medical decisions made by providers, patients, communities and governments. Institutional and psychological constraints will be considered when looking at legal, ethical, moral and personal medical decisions. Medical decisions will also be viewed through various multicultural prisms. This course also examines the balance of pragmatism and compassion in the quickly changing medical arena.

PHYA540 - Obstetrics Module

General

Course Subject Code
PHYA

Course Number
540

Department
Physician Associate Studies

Academic Level (Course Level)
Graduate

Course Description
Provides both a disease oriented and problem-oriented approach to understanding the etiology, pathophysiology, manifestations, diagnosis and treatment of specific diseases encountered in Obstetrics. Content areas in this module include: medical research and reasoning, anatomy, pathophysiology, patient assessment, diagnostic procedures, therapeutics, patient education, medical record keeping, and rural and professional issues.

PHYA561 - Evidence Based Medicine I

General

Course Subject Code
PHYA

Course Number
561

Department
Physician Associate Studies

Academic Level (Course Level)
Graduate

Course Description
??Develops skills in Evidence Based Medicine (EBM). Students will build upon skills acquired during the first year of the program and apply EBM skills to authentic patient cases. Students will explore the limitations and the ethical implications of evidence-based practice. The overall goal of this course will be to extrapolate (EBM) use into their future practice as clinicians. ?

General

Course Long Title
How Things Work

Course Subject Code
PHYS

Course Number
110

Department
Biochem/Chem/Engineer/Physics [BiCEP]

Academic Level (Course Level)
Undergraduate

Course Description
An introduction to a current understanding of the physical universe in terms of fundamental principles of physics. Basic concepts are studied and related to common phenomena and applications found in everyday life as well as more exotic phenomena one may come across in the news or popular-science media. The lecture will make frequent use of experimental equipment and commercial devices in demonstrations of physical principles.

125

Department
Biochem/Chem/Engineer/Physics [BiCEP]

Academic Level (Course Level)
Undergraduate

Course Description
Introduces physics using sports as a context. Basic concepts in classical mechanics and fluid dynamics are used to analyze motion and interactions in baseball, basketball, football, soccer, track and field, and other sports. The lecture will make frequent use of demonstrations of physical principles, simulations, hands-on and kinesthetic activities.

PHYS304 - Nanophysics

General

Course Long Title
Nanophysics

Course Subject Code
PHYS

Course Number
304

Department
Biochem/Chem/Engineer/Physics [BiCEP]

Academic Level (Course Level)
Undergraduate

Course Description
Presents the fundamental processes for deposition and growth of materials with emphasis on nanostructures, the principles of operation of widely used deposition and patterning techniques, and creation of special experimental conditions such as vacuum and gas management. The crystalline structure of solids is emphasized together with the most commonly used methods for determining the crystallinity of a solid.

Additional Comments:

PHYS310 - Modern Physics

General

Course Long Title
Modern Physics

Course Subject Code
PHYS

Course Number
310

Department
Biochem/Chem/Engineer/Physics [BiCEP]

Academic Level (Course Level)
Undergraduate

Course Description
Presents some of the basic concepts and phenomena that constitute modern physics, including studies of the quantum nature of radiation, atomic structure/spectra, X-rays, relativity, wave-particle duality, the uncertainty principle and a brief introduction to nuclear physics and radioactivity. Intended for students majoring in Engineering Physics, Engineering 3+2, Chemistry, Mathematics, and other students interested in the physical sciences.

PHYS404 - Advanced Nanophysics Lab

General

Course Long Title
Advanced Nanophysics Lab

Course Subject Code
PHYS

Course Number
404

Department
Biochem/Chem/Engineer/Physics [BiCEP]

Academic Level (Course Level)
Undergraduate

Course Description
Introduces advanced characterization methods of nano/micro scale systems at an intermediate level. Provides an opportunity for students to define, plan, test, document, and present an experiment with advanced equipment, and demonstrate their ability to work in a team and to manage a small project. Issues related with safety, time management, written and oral communication, and functionality as a member of a team are emphasized.

General

Course Long Title
Mathematical Methods of Physics and Engineering

Course Subject Code
PHYS

Course Number
442

Department
Biochem/Chem/Engineer/Physics [BiCEP]

Academic Level (Course Level)
Undergraduate

Course Description
Presents a selection of mathematical techniques needed to understand and progress in advanced physics and engineering. Several important branches of mathematics will be explored including vector analysis, linear algebra, complex analysis, special functions, Fourier series, Fourier transforms, tensor analysis, and group theory. Required for students majoring in Engineering Physics and Engineering 3+2. We expect this to be of interest to students in Chemistry and Mathematics majors

PHYS491 - Physics Research

General

Course Long Title
Physics Research

Course Subject Code
PHYS

Course Number
491

Department
Biochem/Chem/Engineer/Physics [BiCEP]

Academic Level (Course Level)
Undergraduate

Course Description
Applies theoretical and/or experimental research methods to a special problem beyond the scope of traditional coursework. A plan, mutually agreed upon by the student and the supervising instructor, must be approved in advance. This plan will include a set of goals and methods as well as course evaluation criteria. Typically, the project culminates with a formal research presentation and/or paper. 1-3 credits (variable).

General

Course Long Title
Physics Internship

Course Subject Code
PHYS

Course Number
498

Department
Biochem/Chem/Engineer/Physics [BiCEP]

Academic Level (Course Level)
Undergraduate

Course Description
Conduct a work-study experience related to the physics field under the supervision of an on-site mentor and faculty member. This is intended for Junior- and Senior-level students to gain work-force experiences in a professional setting (industry, government, research, medical) related to the field of physics. Registration requires Department Chair (or designee) approval prior to scheduling.

General

Course Long Title
Play and Playwork – Practice and Provision

Course Subject Code
PLAY

Course Number
330

Department
Early Childhood Education

Academic Level (Course Level)
Undergraduate

Course Description
Introduces students to the history of playwork provision and prominent theoretical perspectives on the value of play for children. Students will further explore the various roles of the playworker and gain familiarity with the current depth and breadth of playwork provision.

General

Course Long Title
Playwork Exploratory Practicum

Course Subject Code
PLAY

Course Number
331

Department
Early Childhood Education

Academic Level (Course Level)
Undergraduate

Course Description
Enables students to create multifaceted play opportunities and experiences for children emphasizing enjoyment and participation in an environment facilitating free choice. Students will partner with an approved community agency to apply practical playwork concepts in a primarily observational capacity. To complete fieldwork with children and youth, students must possess up-to-date, required clearances as per local and state regulations.

PLSH102 - Elementary Polish II

General

Course Subject Code
PLSH

Course Number
102

Department
Languages And Cultures

Academic Level (Course Level)
Undergraduate

Course Description
Develops communicative language proficiency at the Novice-High and Intermediate-Low sublevels (according to ACTFL proficiency scale) as well as develops the ability to understand and appreciate Polish-speaking cultures. A communicative method is applied to develop the four language skills (speaking, listening, reading, writing) in an intercultural content. This includes the use of authentic audio-visual materials introducing the Polish-speaking world, situational communicative practice in listening, speaking, reading and writing, and laboratory activities.

POLI101 - U.S. Presidential Election of 2024

General

Course Long Title
U.S. Presidential Election of 2024

Course Subject Code
POLI

Course Number
101

Department
History, Poli Sci & Philosophy

Academic Level (Course Level)
Undergraduate

Course Description
Introduces basic ideas and concepts related to the 2024 US Presidential Election. It provides context and background information on the election, including topics such as primaries, the Electoral College, public opinion polls, and media coverage. The purpose is to provide all students with basic tools for understanding the dynamics and outcome of the presidential election.

Instructional Method / Attendance Policy
Online 100%

Enrollment Restrictions
none--the purpose of the course is basic introduction and is appropriate for all interested students, including incoming first-year students.

POLI371 - Political Philosophy

General

Course Subject Code
POLI

Course Number
371

Department
History, Poli Sci & Philosophy

Academic Level (Course Level)
Undergraduate

Course Description
Examines and analyses the writings and ideas of political philosophers from Socrates to current times. Course content revolves around the fundamental political concepts of sovereignty, citizenship, liberty, justice, law, rights, and responsibilities with significant discussion of the proper authority of the state over the individual and the rights and responsibilities of citizens within a state. Political philosophies will include those of Plato, Aristotle, Hobbes, Mill, Locke, Rousseau, and Rawls.

PORT101 - Elementary Portuguese I

General

Course Subject Code
PORT

Course Number
101

Department
Languages And Cultures

Academic Level (Course Level)
Undergraduate

Course Description
Initiates students' development of the four language skills (speaking, listening, reading, writing) required to use the Portuguese language in a communicative context. Anticipated proficiency upon successful completion of the course is the Novice-Mid sublevel (based upon the American Council on the Teaching of Foreign Languages). Introduces students to features of Portuguese and Brazilian cultures that are associated with the targeted communicative activities.

Examines developmental, personal and social issues confronting adolescents as they emerge from childhood and strive for adulthood. Examines development across this period from biological, psychological, and social perspectives. The diversity of influences on normative development, including, but not limited to race, ethnicity, culture, socioeconomic status and social institutions (including the school, family, and community settings) will be presented. The research methods utilized to develop the findings discussed in the course will be examined.

Academic Level (Course Level)
Undergraduate

Course Description
Introduces the history of psychological disorders and provides a scientific study of the assessment, symptoms, causes, and treatments of maladaptive behavior and psychological disorders defined in the Diagnostic and Statistical Manual of Mental Disorders. This course addresses major theoretical models of psychopathology, focusing attention on empirically based methods used to modify, change, or prevent maladaptive thinking and behavior.

PSYC336 - Psychology of Personality

General

Course Long Title
Psychology of Personality

Course Subject Code
PSYC

Course Number
336

Department
Psychology

Academic Level (Course Level)
Undergraduate

Course Description
Introduces the field of personality psychology, including scientific and theoretical orientations to self and personality. The course emphasizes both the research methodologies used to examine and assess personality and the theoretical conclusions that have been reached from different perspectives. Students will engage in critical analysis of the strengths and weaknesses of both established and emerging personality theories, as well as the characteristics of a healthy personality and how that informs a wellness approach in psychology.

PSYC493 - Independent Study for Psychology

General

Course Long Title
Independent Study for Psychology

Course Subject Code
PSYC

Course Number
493

Department
Psychology

Academic Level (Course Level)
Undergraduate

Course Description
Provides for the study of a topic via review and research of technical psychological literature and/or empirical manipulation of variables in the field or laboratory under supervision of a psychology faculty member. Independent study is initiated by the student to increase knowledge in a particular area of psychology. The topic is examined in an intensive manner with guidance by a faculty member who has special expertise in that field.

PSYC498 - Psychology Internship

General

Course Long Title
Psychology Internship

Course Subject Code
PSYC

Course Number
498

Department
Psychology

Academic Level (Course Level)
Undergraduate

Course Description
Provides practical experience and beginning professional skills to selected students. This is an internship that will focus on applied skills, community service, or research work in settings appropriate to the student's interests and curriculum, including mental health and other human service programs, hospitals, human resource offices, and industrial or governmental agencies. The goal is to relate theoretical learning to practical applications.

RADT110 - X-Ray Technology I

General

Course Long Title
X-Ray Technology I

Course Subject Code
RADT

Course Number
110

Department
Health and Exercise Science

Academic Level (Course Level)
Undergraduate

Course Description
Introduces the basic elements of radiologic technology. Students will discuss and evaluate the following: medico-legal issues, professionalism, radiation protection practices, digital imaging, and radiologic terms. In-person basic hand hygiene and interprofessional activities are included. This course is a professional course within the Radiologic Technology curriculum and radiology students are given preference.

RASC140 - Radioecology

General

Course Long Title
Radioecology

Course Subject Code
RASC

Course Number
140

Department
Biochem/Chem/Engineer/Physics [BiCEP]

Academic Level (Course Level)
Undergraduate

Course Description
Introduces the early history of radioactivity in the environment, emissions from nuclear reactors and explosions, and transport and dispersion of radioactive pollutants. Describes the design of radiological monitoring programs including environmental sampling and analysis for radioactive contamination. Applies mathematical techniques for estimating the release, transport, and fate of contaminants in multi-media environmental pathways (air, ground water, terrestrial).

RASC150 - Radiation Regulations

General

Course Subject Code
RASC

Course Number
150

Department
Biochem/Chem/Engineer/Physics [BiCEP]

Academic Level (Course Level)
Undergraduate

Course Description
Introduces ionizing and non-ionizing radiation protection laws and regulations;?historical, biological, and legal foundations; the key nuclear regulatory agencies; and current radiation protection standards and organizations responsible for their implementation.? Describes nuclear fuel cycle; application of byproduct materials in medicine; radioactive waste disposal methodology; and emergency procedures.? Reviews regulations dealing with shipment and transportation of radioactive materials.? Appropriate for students in all majors.? Three hours lecture per week.

READ510 - Literature, Literacy and Culture

General

Course Long Title
Literature, Literacy and Culture

Course Subject Code
READ

Course Number
510

Department
Early Childhood Education

Academic Level (Course Level)
Graduate

Course Description
Explores the role of literature in improving students reading, writing, and language growth in grades K-12. Focuses on the role of multicultural literature in prompting cross-cultural understandings in a student-centered language arts program. Specific topics include selecting quality literature, developing literature-based multicultural thematic units, implementing diverse literature, second language acquisition, developing and implementing strategies to advocate for equity literacy, and recognizing the influence of culture on literacy teaching and learning.

General

Course Long Title
Early Language and Learning to Guided Reading and Writing

Course Subject Code
READ

Course Number
530

Department
Early Childhood Education

Academic Level (Course Level)
Graduate

Course Description
Provides an in-depth examination of reading and writing development from birth to early literacy learning. This course is based on the combination of the scientifically-based reading research approach to literacy instruction as well as the emergent literacy perspective, which creates a blended, balanced approach to language and literacy teaching and learning. Research literature will be reviewed as it pertains to children's literacy development and best practice balanced literacy instruction.

REST321 - Mechanical Ventilation

General

Course Long Title
Mechanical Ventilation

Course Subject Code
REST

Course Number
321

Department
Health and Exercise Science

Academic Level (Course Level)
Undergraduate

Course Description
Examines and practice the care of patients requiring continuous mechanical support of ventilation in classroom and laboratory. The mechanics of ventilation and breath delivery is presented along with an introduction of ventilators. Discussion includes the mechanics of ventilator modes, classification, the control interrelations, the electro-pneumatic/microprocessor systems, the audiovisual alarm systems, the need for mechanical ventilation and initial ventilator settings as well as weaning and discontinuation of mechanical ventilation. A selection of current ventilators including noninvasive ventilator and modes are presented during lab and provide hands on experience in troubleshooting, setup, control function, alarm setting and mode changes.

RUSS101 - Elementary Russian I

General

Course Long Title
Elementary Russian I

Course Subject Code
RUSS

Course Number
101

Department
Languages And Cultures

Academic Level (Course Level)
Undergraduate

Course Description
Initiates students' development of the four language skills (speaking, listening, reading, writing) required to use the Russian language in a communicative context. Anticipated proficiency upon successful completion of the course is the Novice-Mid sublevel (based upon the American Council on the Teaching of Foreign Languages). Introduces students to features of Russian and Slavic cultures that are associated with the targeted communicative activities.

RUSS102 - Elementary Russian II

General

Course Subject Code
RUSS

Course Number
102

Department
Languages And Cultures

Academic Level (Course Level)
Undergraduate

Course Description
Develops communicative language proficiency at the Novice-High and Intermediate-Low sublevels (according to ACTFL proficiency scale) as well as develops the ability to understand and appreciate Russian-speaking cultures. A communicative method is applied to develop the four language skills (speaking, listening, reading, writing) in an intercultural content. This includes the use of authentic audio-visual materials introducing the Russian-speaking world, situational communicative practice in listening, speaking, reading and writing, and laboratory activities.

RUSS151 - Intensive Elementary Russian

General

Course Long Title
Intensive Elementary Russian

Course Subject Code
RUSS

Course Number
151

Department
Languages And Cultures

Academic Level (Course Level)
Undergraduate

Course Description
Initiates students' development of the four language skills (speaking, listening, reading, writing) required to use the Russian language in a communicative context. Anticipated proficiency upon successful completion of the course is the Novice-High sublevel (based upon the American Council on the Teaching of Foreign Languages). Introduces students to features of Russian and Slavic cultures that are associated with the targeted communicative activities.

Undergraduate

Course Description
Defines what constitutes a social problem and examines the negative impacts of a wide range of objective and subjective social problems in contemporary American society. Specific attention is paid to poverty, racism, sexism, homophobia, crime, environmental and a host of other current issues that affect large numbers of Americans. The course uses a sociological lens to uncover the effects of stereotypes, implicit biases, prejudice and discrimination upon vulnerable and marginalized groups of people living in The United States.

SOCI201 - Families in Society

General

Course Long Title
Families in Society

Course Subject Code
SOCI

Course Number
201

Department
Anthro/Crim Justice/Sociology

Academic Level (Course Level)
Undergraduate

Course Description
Examines diverse forms and ideas of marriage and family life in society as reflected in changing social conditions and social policies. Focus is given to the identification and function of a wide range of values, norms, and codes, which often vary within and between societies or cultures, relevant to marriage and family decision-making. Investigates key concerns for contemporary families including communication and power, the balance of work, and family obligations.

General

Course Long Title
Racial and Ethnic Relations GE

Course Subject Code
SOCI

Course Number
202

Department
Anthro/Crim Justice/Sociology

Academic Level (Course Level)
Undergraduate

Course Description
Introduces students to the sociological study of societies with racial and ethnic diversity. Emphasizes theories, concepts, and evidence for understanding racial and ethnic inequality and intergroup relations. Uses a sociological lens to understand the history and current status of selected minority groups in the United States. Examines causes and consequences of prejudice and discrimination, the systemic nature of racial and ethnic inequality, and means for personal and social change.

General

Course Long Title
Introduction to Sociological Research Methods

Course Subject Code
SOCI

Course Number
250

Department
Anthro/Crim Justice/Sociology

Academic Level (Course Level)
Undergraduate

Course Description
Introduces students to social science research methods common in sociology and criminal justice. Finding, reviewing and critically evaluating research literature and exploring essential components in the design of ethical research projects are central. Quantitative techniques are emphasized but attention is given to other approaches as well (e.g., qualitative and evaluation research). The course is required for sociology and criminal justice majors but is open to other interested students.

General

Course Long Title
Foundations of Sociological Thought

Course Subject Code
SOCI

Course Number
260

Department
Anthro/Crim Justice/Sociology

Academic Level (Course Level)
Undergraduate

Course Description
Examines classical social theory that impacted the development of sociology as an academic discipline. Emphasizes key figures like Durkheim, Marx, Weber and Mead, but others may receive attention as well. Explores how classical theories illuminate aspects of modernization and contemporary society. Shows the influence of classical theories on contemporary perspectives in sociology. Compares and contrasts the major theoretical paradigms in sociology in order to illuminate their strengths and weaknesses.

SOCI301 - Social Stratification

General

Course Long Title
Social Stratification

Course Subject Code
SOCI

Course Number
301

Department
Anthro/Crim Justice/Sociology

Academic Level (Course Level)
Undergraduate

Course Description
Introduces students to the study of social stratification in and across societies. Students will investigate the dimensions of inequality among social positions, analyze the means by which individuals and groups attain unequal rank, and critique theories regarding the intersection of class, race, and gender. Explores the history and issues associated with theorizing and measuring social class and inequality.

SOWK200 - Diversity and Social Justice

General

Course Subject Code
SOWK

Course Number
200

Department
Social Work

Academic Level (Course Level)
Undergraduate

Course Description
Introduces diverse populations. Reviews differences based on age, class, color, culture, disability, ethnicity, gender identity and expression, immigration status, political ideology, race, religion, sex, and sexual orientation based on a global perspective. Students develop tools for increased understanding of and sensitivity to human diversity and cultures from across the globe. Students will gain the knowledge, disciplinary skills, ethical reasoning, and appreciation of international and multicultural perspectives needed to reduce personal bias and advocate for social justice.

Course Description
Provides the theoretical knowledge base for social work practice. The course emphasizes the bio-psycho-social development patterns of individuals, families, and groups as they interact in various environments. Theories of human behavior pertaining to individuals and families are critically reviewed. The course looks at the policy and research implications of human behavior in social environments. The course is designed for graduate level social work students. Instructional methods may include but are not limited to lectures, readings, papers, reflections, and role plays.

513

Department
Social Work

Academic Level (Course Level)
Graduate

Course Description
Highlights the presence of alcohol and other drug (AOD) use disorders as an influence on problems encountered across many practice areas, including but not limited to: children and youth, criminal justice, mental health, and diverse populations. Policy issues related to AOD will also be explored. Introduces evidence-based screening tools for detecting AOD risk factors to students, who then practice them in a variety of active learning exercises. Provides students with a set of basic practice guidelines for working effectively with individuals who reflect some level of AOD abuse or dependence.

General

Course Long Title
Leadership and Organizational Culture in Social Work

Course Subject Code
SOWK

Course Number
514

Department
Social Work

Academic Level (Course Level)
Graduate

Course Description
Presents an overview of leadership and management evidence- based models and theories applied to social work practice. The class prepares graduate students to identify and apply leadership behaviors in clinical practice, non-profit sectors, health and human service organizations, and non-traditional social work settings. Students in this course will aim to understand leadership and management practices to effectively respond to challenges and opportunities in organizations. Seminar discussions, case studies, experiential exercises, and field work will be used to foster self-awareness and application of leadership behaviors at different practice levels. Students will develop a comprehensive leadership perspective that fosters individual and organizational growth through thoughtful and purposeful action and change. Offered as an elective in the MSW program.

General

Course Long Title
Social Welfare Policy and Services I

Course Subject Code
SOWK

Course Number
516

Department
Social Work

Academic Level (Course Level)
Graduate

Course Description
Examines various aspects of social welfare policy and services. The focus of this course includes the history, politics, economics, culture, and ethics of social policy as it relates to the social work profession and the social service delivery system. This graduate level course will review current patterns and contextual factors that facilitate and inhibit changes in social policies. Students will study the role of social work as it relates to the analysis of social welfare policies and will begin to make connections with policy practice concepts in the field setting. Instructional methods may include but are not limited to presentations, experiential learning activities and discussion boards, online activities, synchronous and asynchronous lectures.

Course Description
CSWE guidelines require foundational coursework for Traditional students that focuses primarily on the development of generalist practice course knowledge, awareness of values, and basic skill development during the first year of the program. This course addresses the steps involved in the problem-solving process (engagement, assessment, planning, intervention, evaluation, and termination) and how that process is applied to both individuals and families in various practice settings. The importance of strengths and resilience as well as the core values of the profession are highlighted in the course of applying this process model to practice. This course develops generalist practice knowledge. It focuses on the CSWE dimensions of learning that emphasizes knowledge, values, and basic skill development for first-year Traditional students.

Department
Social Work

Academic Level (Course Level)
Graduate

Course Description
Examines the knowledge, values, ethics, and skills that comprise the core of professional generalist social work practice with organizations and communities. The focus includes the philosophical foundation of social work, self- awareness, values and ethics of the helping person, and the nature of professional relationships and client-worker partnerships. The complexity of social work practice from a systems/ecological perspective that is strengths-based is presented. Students also acquire knowledge about the stages, activities, and skills of problem-solving practice, engagement, assessment, intervention, evaluation, and termination. Application of these objectives will be made in field education, which will happen concurrently with this course. The course is designed for graduate-level social work students. Instructional methods may include, but are not limited to, lectures, readings, papers, reflections, and role plays. This course may be offered in a distance education format.

Department
Social Work

Academic Level (Course Level)
Graduate

Course Description
Provides an introduction course for research methods, this course will be designed to develop the student's ability to use and engage in both quantitative and qualitative research in order to inform and evaluate their own social work practice. The course addresses key research concepts and procedures such as hypothesis formulation, measurement, sampling, research design, and data collection. The course also examines ethical issues in the conduct of social research, including informed consent, anonymity and confidentiality; culturally sensitive research methods, and the NASW Code of Ethics. The course is designed for graduate level social work students. Instructional methods may include but are not limited to lectures, readings, papers, and reflections.

Course Description
Provides theory and skills required for advanced practice with individuals, couples, and families. Advanced practice builds upon students' foundational knowledge of generalist practice in engagement, assessment, intervention and evaluation. This course provides instruction in the use of evidence-based models. Vulnerable populations will be identified and students will further develop their knowledge of multicultural social work with individuals. This course provides an overview of various theoretical approaches: including psychodynamic, cognitive behavioral, humanistic, post-modern and trauma informed. This course includes a more sophisticated understanding of the bio-psychosocial model, the helping relationship, and the strengths perspective. The target audience includes second year graduate students in the MSW program. Method of delivery may include in-person and/or distance learning instruction.

Course Description
Examines models of policy analysis and application of models to social welfare issues and problems. This graduate level course emphasizes the contextual factors contributing to social issues, service delivery, and resource allocation. Examines the various social, economic, and political forces that influence policy development, policy implementation, and program delivery. Opportunities for integrating knowledge in the field education setting are stressed with a primary focus on recognizing social problems, populations at risk, and the ways that legislative and political processes shape policy issues. Instructional methods may include but are not limited to presentations, experiential learning activities and discussion boards, online activities, synchronous and asynchronous lectures.

Course Description
Provides an introduction to the concepts and procedures that are fundamental to both descriptive and inferential statistics. Empirical research examining the effectiveness of social work practice, particularly in the urban environment, is explored. Utilizing existing national data sets, students generate their own research hypotheses and then formulate and carry out an analytic strategy to answer these questions effectively. Emphasis is also placed on gaining skills in presenting and communicating key findings to relevant audiences and stakeholders. The course is designed for graduate level social work students. Instructional methods may include but are not limited to lectures, readings, papers, and reflections. This course may be offered in a distance education format.

General

Course Long Title
Introduction to Individuals with Exceptionalities

Course Subject Code
SPEC

Course Number
110

Department
Exceptionality Programs

Academic Level (Course Level)
Undergraduate

Course Description
Focused on the protection of basic human rights for all individuals, the course examines research-based systemic educational practices, such as tiered intervention supports and high-leverage practices. Introduces laws and guidelines regarding identification of exceptionalities utilizing definitions, characteristics, and etiology within educational contexts through the lens of cultural relevancy and ethics including racial, ethnic, and social diversity. This course examines historical, current cultural, and ethical issues surrounding individuals with exceptionalities.

SPEC502 - Collaboration with Families, Agencies, and the Community to Support Individuals with Autism Spectrum

General

Course Long Title
Collaboration with Families, Agencies, and the Community to Support Individuals with Autism Spectrum

Course Subject Code
SPEC

Course Number
502

Department
Exceptionality Programs

Academic Level (Course Level)
Graduate

Course Description
Provides students with an advanced level of knowledge and skills to effectively collaborate with families, agencies, and communities to support the educational, social, functional, and transition needs of students with Autism Spectrum Disorder (ASD). Students will examine family systems and issues that impact family dynamics. Significant emphasis will be on identifying available community resources, designing individual programming, promoting collaborative efforts, leading cross-system planning efforts, and providing professional service leadership activities.

Course Description
Explores the principles of human behavior, multi-tiered systems of support, culturally relevant trauma-informed group management procedures, and design/ implementation of person (student)-centered behavior support plans. This course engages students through implementation of these practices within an embedded field-experience. It examines the relationship among research, policy and practice as it pertains to prevention and early intervention with group and individual problems at school and community levels. The course is designed using a team-based learning format to mirror collaborative expectations in the field.

SPMG230 - Contemporary Issues in Sport Management

General

Course Long Title
Contemporary Issues in Sport Management

Course Subject Code
SPMG

Course Number
230

Department
Management

Academic Level (Course Level)
Undergraduate

Course Description
Outlines contemporary issues and problems in the field of sport management. Students will research, discuss and debate current issues. Emphasis will be placed on connecting contemporary issues to the research and theories that underlie them, as well as to practical problem-solving strategies used by sport managers.

SPPP500 - Research Methods in Sport and Performance Psychology

General

Course Long Title
Research Methods in Sport and Performance Psychology

Course Subject Code
SPPP

Course Number
500

Department
Health and Exercise Science

Academic Level (Course Level)
Graduate

Course Description
Provides an overview of descriptive and experimental research strategies and designs relevant to sport and exercise science. Prepares graduate students to design, conduct, and report research. Emphasis is placed upon planning research, utilizing research methods, and interpreting results.

Grade Modes
Credit/No Credit, Academic Forgivness, Pass/Fail, Standard Letter

SPPP501 - Cognitive and Affective Bases of Human Behavior

General

Course Long Title
Cognitive and Affective Bases of Human Behavior

Course Subject Code
SPPP

Course Number
501

Department
Health and Exercise Science

Academic Level (Course Level)
Graduate

Course Description
Examines the cognitive and emotional influences on behavior. Students will gain knowledge of the developmental sequences associated with cognitive development, emotional development, and moral development. Students will also gain an understanding of how humans process information and organize their knowledge and emotional experiences. Students will be required to integrate theoretical knowledge with practical strategies and interventions appropriate for youth and adolescents.

General

Course Long Title
Mental Health in Sport and Performance Settings

Course Subject Code
SPPP

Course Number
503

Department
Health and Exercise Science

Academic Level (Course Level)
Graduate

Course Description
Provides a strong base of knowledge of theory, research and practice related to mental health and sport and performance settings including an examination of psychological disorders and abnormal human behavior. Provides prospective sport and performance psychology professionals with essential information for mental health promotion in sport and performance settings.

General

Course Long Title
Foundations of Sport and Performance Psychology

Course Subject Code
SPPP

Course Number
510

Department
Health and Exercise Science

Academic Level (Course Level)
Graduate

Course Description
Surveys the psychological factors related to performance and participation in sport and performance settings. Emphasis is placed on determining how psychological variables influence participation in physical pursuits and how participation affects the psychological well-being of the individual. This course will assess theoretical and methodological approaches to a variety of sport and performance psychology topics including motivation, group processes, competition, and performance enhancement.

SPPP511 - Sport and Performance Psychology Across the Lifespan

General

Course Long Title
Sport and Performance Psychology Across the Lifespan

Course Subject Code
SPPP

Course Number
511

Department
Health and Exercise Science

Academic Level (Course Level)
Graduate

Course Description
Focuses on developmental changes in the psychosocial antecedents and consequences of sport and physical activity across the lifespan. Specific topics include (1) describing theoretical frameworks and methods used to study sport and physical activity related psychosocial development across the lifespan, (2) describing how self-perceptions develop and influence behavior in movement contexts at different points in life, and (3) explaining how social and contextual factors influence developmental processes associated with physical activity.

General

Course Long Title
Sport Psychology for Performance Enhancement

Course Subject Code
SPPP

Course Number
512

Department
Health and Exercise Science

Academic Level (Course Level)
Graduate

Course Description
Evaluates the nature of performance, sources of performance crises, and self-regulation strategies used to enhance sport performance. Specific objectives include (a) distinguishing the antecedents and consequences of subjective and objective performances, (b) conceptualizing motor performance and performance problems in a psychological context, and (c) matching psychologically-based performance problems with theoretically-based intervention strategies. This class is specifically designed to help students formulate practical strategies for teaching various psychological skills from an education perspective.

General

Course Long Title
Cultural and Ethnic Diversity for Sport Psychology Consulting

Course Subject Code
SPPP

Course Number
517

Department
Health and Exercise Science

Academic Level (Course Level)
Graduate

Course Description
Examines the influence of cultural and ethnic differences on the delivery of sport psychology consulting. This course is designed to develop appropriate skills, competencies and knowledge of consultants working with diverse populations. The analysis of conceptual frameworks for sociopolitical and cultural factors that impact human behavior will provide an understanding of diversity, multiculturalism, and cultural awareness. Students explore topics including culture, ethnicity, race, national origin, language, physical appearance and ability, sexual orientation, and spirituality.

General

Course Long Title
Social Work Practice with Families

Course Subject Code
SWK

Course Number
3352

Department
Social Work

Academic Level (Course Level)
Undergraduate

Course Description
Focuses on ethical practice content that encompasses values, knowledge, and skills to work with FAMILIES, including engaging clients in an appropriate working relationship; identifying needs, resources, and assets; collecting and assessing information; evaluating program outcomes and practice effectiveness; and planning for service delivery. Includes content on identifying, analyzing, and implementing empirically based interventions designed to achieve client goals, through the use of communication skills, supervision, and consultation. Emphasizes strengths, capacities and resources of client systems, especially those populations at risk, in relation to their broader environments. Promotes strategies for effective practice with persons from diverse backgrounds and considers technological advances.

THEA103 - Theatre Appreciation

General

Course Long Title
Theatre Appreciation

Course Subject Code
THEA

Course Number
103

Department
Music, Theatre, and Dance

Academic Level (Course Level)
Undergraduate

Course Description
Explores the fundamental relationship between theatre and empathy; examining how theatre invites audiences to learn about other people's perspectives and actions. The course introduces the terminology, process, genres, and basic techniques of theatrical production; students learn about a variety of theatre artists and companies. Attendance at live theatrical events is required for most offerings. Open to students in all majors.This blended class requires attendance at 3 live, in-person theatrical events in Bloomsburg over the course of the semester. Each of the required attendance assignments will include limited options of available dates and/or times to attend. Only students who will be in Bloomsburg to attend these performances should enroll in order to maximize student success in the course. The remainder of the coursework will be completed asynchronously online. asynchronously. Please contact Carrie Winship (cwinship@commonwealthu.edu) with any questions.

THEA105 - Script Analysis

General

Course Long Title
Script Analysis

Course Subject Code
THEA

Course Number
105

Department
Music, Theatre, and Dance

Academic Level (Course Level)
Undergraduate

Course Description
Introduces tools and methods used to understand plays and discover their potential production and performance values. Provides a basis for theatrical criticism and for an aesthetic appreciation of theatre. Through application assignments and discussion, students learn a variety of techniques to closely read, interpret, and analyze dramatic literature texts as an essential foundation for all types of production work in theatre. Students read plays demonstrating a variety of styles, periods, and artistic standpoints.

THEA110 - Introduction to Acting

General

Course Long Title
Introduction to Acting

Course Subject Code
THEA

Course Number
110

Department
Music, Theatre, and Dance

Academic Level (Course Level)
Undergraduate

Course Description
Introduces the terminology, theories, and techniques of acting. Provides general education students opportunities for individual, paired and group exercises which explore acting in a hands-on learning environment. Skills and methods learned about communicating with others via performance are highly transferrable to almost any professional or personal environment. Students perform improvised and scripted scenes and monologues. Students also see and critique performances on and off-campus.

THEA205 - Theatre History I

General

Course Subject Code
THEA

Course Number
205

Department
Music, Theatre, and Dance

Academic Level (Course Level)
Undergraduate

Course Description
Explores the works, production techniques, and styles of selected examples of world theatre traditions from its origins through the 17th century, focusing on the cultural, sociopolitical, artistic, and historiographical contexts that shape them. The course includes close reading and discussion of plays, examination of primary and secondary texts, and application projects that engage research methods and dramaturgical techniques used to inform contemporary production of historical plays from this era.

General

Course Long Title
Voice and Movement

Course Subject Code
THEA

Course Number
212

Department
Music, Theatre, and Dance

Academic Level (Course Level)
Undergraduate

Course Description
Explores kinesthetic awareness, healthy use and conditioning of the voice/body for successful stage/presenting work, and imaginative vocal/physical skills to utilize the body as a dynamic artistic instrument available for inventive interpretations of theatrical texts. While actively engaging with multiple recognized methodologies, students become more deeply attuned with their vocal/physical instrument, habits of instrument use, and tools to strengthen creative control and intentional use of self in space. Students will explore/present multiple solo performance studies.

THEA374 - Lighting Design & Technology

General

Course Long Title
Lighting Design & Technology

Course Subject Code
THEA

Course Number
374

Department
Music, Theatre, and Dance

Academic Level (Course Level)
Undergraduate

Course Description
Explores the elements, technology, and process involved in the development of lighting designs for the stage. Offers extensive active opportunities to practice the creative and collaborative process resulting in viable, engaging, and dynamic products. Reinforces the importance of design work for effective storytelling by all theatre artists, regardless of focus, as well as others interested in various forms of media dependent on visual storytelling.

Instructional Method / Attendance Policy

THEA405 - Explorations of Contemp Thtr

General

Course Subject Code
THEA

Course Number
405

Department
Music, Theatre, and Dance

Academic Level (Course Level)
Undergraduate

Course Description
Explores the works, production techniques, and styles of selected examples of world theatre traditions in the 20th and 21st centuries, focusing on the cultural, sociopolitical, artistic, and historiographical contexts that shape them. Areas of focus may vary in response to urgent trends within the field of theatre history and student interest in topics of advanced study. The course builds upon foundational research and analysis skills developed in earlier Theatre History/Criticism sequence courses.

WLCU498 - Internship

General

Course Subject Code
WLCU

Course Number
498

Department
Languages And Cultures

Academic Level (Course Level)
Undergraduate

Course Description
Provides opportunities for students to apply the theory learned in the classroom to situations occurring in the workplace. Careful planning with the department's internship coordinator enables the students to schedule these experiences to complement their academic program. Participation in the university's internship adds an important dimension to student's educational experience and future career plans. For seniors only.

WRIT101 - Foundations in Composition

General

Course Long Title
Foundations in Composition

Course Subject Code
WRIT

Course Number
101

Department
English

Academic Level (Course Level)
Undergraduate

Course Description
Offers opportunities to compose a variety of texts for different situations with attention to purpose, audience, context, and conventions. Students will practice analysis and critical reading and thinking with emphasis on college-level research skills and will develop effective processes for reading, writing, and research. Designed for students who nearly meet the placement criteria for WRIT103 or for students who self-select in order to receive additional support in a required 1-credit co-requisite course.

Grade Modes
Credit/No Credit, Academic Forgivness, Pass/Fail, Standard Letter
